

WMS

The Bridge Batch is an 'out of the box' software package that utilises the multiple benefits of modern barcode technology. This user friendly solution is designed to ensure accurate and efficient processes throughout the Supply Chain, ultimately for better Warehouse Management. The Bridge Batch incorporates all aspects of day to day routine including stock takes, goods receipts, picking orders and stock movements and transfers.

Stock Management

The Bridge Batch provides complete stock management via the use of a hand-held device. The combination of hardware and the Bridge Batch software means an ERP/MRP system can be updated from the warehouse floor. This solution has been proven to continuously save time and money. The Bridge Batch includes all the starter modules required for successful integration into any company; including Stock Taking (STK), Sales Order Processing (SOP) and Purchase Order Processing (POP).

Key Benefits

- No transcription/hand writing errors means improved accuracy.
- Reduced duplication of transactions results in enhanced utilisation of staff.
- Time saved during work hours can be allocated to focus on customers.
- The standard modules can be customised to suit you as your company grows.
- The Bridge Batch can be upgraded to Bridge Live at anytime.

Key Features

- Stock Processing, Sales Order Processing and Purchase Order Processing.
- Modern barcode symbology and Data Capture Technology has been used to create the best Warehouse Management Solutions.
- Barcodes can be printed onto standard labels direct from Bridge Desktop or via the hand-held device.
- Wi-Fi from scanner to server for transporting batch records.
