Bridge Version 4.68

HHD

Fix for PO Processing:
- Was not bringing down batch number and exp. date in csv.
- Live PO Receipt with standard bridge, if user scans barcode for first line it was setting put away bin number same for all lines, even if user leaves blank bin for rest of the lines.

Fix for SO Processing:
- Was not inserting "/" and "." for faceted and decimal products.
- Live S/O picking, on quantity screen if user clicks "Back" it was not taking user back to previous screen.
- HHD was crashing with Overflow exception if user enters max chars into Batch field
- Live S/O picking with simple courier with prompt for box, user were unable to insert "/" in quantity field with on screen key board.
- 910067: At the END of picking an order, after labels & photos processes, complete and despatch the order facility to allow the picker to select (from a predefined option list) which printer they would like the delivery note to be printed to.

Fix for Stock transfer:
- HHD was crashing with overflow exception if user enters quantity as max chars for ex. "99999999999" on stock transfers with batch and live mode.

Fix for 2-way transfers:
- Was showing user message "Quantity is too large" even if there is enough quantity available to transfer.
- Was transferring with "Transfer All" quantity 1 for all items even if all items has different quantities for ex. 1.4, 1.22, 1.123, 1.1234 or 1/123
- Quantity after decimal and facetor was not showing on TO tab after scanning product barcode for ex. if user enters 1.1234 for 4 decimal it was showing quantity 1 instead of 1.1234
- Live 2-way transfers with standard bridge was not showing quantity after decimal on TO tab.
- Live 2-way transfers with standard bridge was not transferring correct quantity for faceted product.

Fix for requisition:
- HHD was crashing with Null Reference Exception if user try to select delivery method by pressing down or up arrow on HHD.
- Was showing courier screen even if user doesn't scan any product at all and simply click cancel the requisition process.
- 910026: When entering blank courier information on the final part of Requisitions, if any field is blank, it comes up with 'NullReferenceException'

Fix for Stock Movement:
- HHD was crashing with Unexpected error if user try to scan product barcode on review screen.

Fix for Stock Lookup:
- If user scans product in TEST warehouse and adjust bin, once it returns to main screen it was changing warehouse to MAIN.

LiveLink

Fix for Live S/O Picking:
- Once order is completed it prints out delivery no, but also logs error "Exception occurred too many columns. In printdeliverynotes at 5384,System"

- Once order completed it prints out delivery no, but also logs error Exception occurred SQL: Column 'IT_QTYNUM' is not found. In printdeliverynotes at 5384,System.
- When user tries to complete parked order it fails with "MultiBin :Bin/Warehouse 'TEST/' Invalid,System" or MultiBin :Bin/Warehouse 'MAIN/' Invalid,Systemerror.
- Exception occurred Alias 'TITRAN' is not found. In process at 785,System ,No Order Lines Returned,System
- Complete Pack without setting default pick bins Live Link fails with Multibin :Warehouse/Bin'MAIN/' Invalid,System

MultiBin and Tracking

Fix for Tracking Enquiry:
- Action | Print Batch labels or F3 was not printing anything.

Fix for Stock Transfer Batch:
- Was allowing user to enter batch number for non-traceable products. batch & exp. date field will be disable on batch/serial tab if non-traceable item is selected
- Import stock transfer | On Batch/Serial tab, if you change batch number for traceable item | click close to cancel transfer process |click no to save message Opera was crashing with "Function argument value, type, or count is invalid", MJMIMPORTTRANSFERS.ERROR.
