

HHD

- 914862: On live picking required. Quantity was not showing correct decimals.
- 915017: Live picking with decimal & faceted item was showing required. quantity and def. quantity in incorrect format.
- 914246: Added View Header button to view order header at any time during picking (not on confirm quantity screen).
- 912638: Added calculated required quantity for sales order in live Pick & Pack, if you have set unit volume in opera.
- 914271: Fix for changed the stock look-up grid to remember the width of the columns on this screen. if the user re-sizes the column and closes the form the next time the form is displayed the width will be remembered
- 915045: HHD was crashing with format exception.
- 915048: HHD crashes with NullReferenceException when user clicks Pick.

New Feature:

- New feature is added in non-marshall picking to unpick picked lines, by clicking skip button which will display list of picked and unpicked line, select picked line and click "un-Pick" this will update required quantity.
- 914246: During pick process allow user to view header screen by clicking "View Header" button.
- 914247: Amend scanner so that transfers process will always put none prefixed scans into the product code field
- 914250: Amend transfer screen to display default pick bin location on transfers screens.

LiveLink

Bug Fix:

- Non-marshall picking with non-stock item was showing variable "DTEINV" not found.
- Issuing one of the WO component was issuing other component too.
- Completing sales order from despatch manager was taking too long, if user has different company letter set in rapmen live link was getting stuck in loop.
- Live picking with marshal or nonmarshal was not populating correct values for Cx_value in CNOML table.
- Errors when non-stock items to be picked on scanner
- 914031: Added delivery report to print delivery note from multiple sites, (Need to add WHPrinter in live link config)
- 913478: sales order line value was changing after picking an order (Delivery at invoice stage).
- 913289: Sales order with descriptive line was not auto completing after picking.
- 913805: Issuing WO component was issuing from FIFO bin even if user specifies different bin on scanner.
- 913952: Added sales order document number into DX XML courier file name for uniqueness.
- 914239: Fix for the PICK warehouse was posting into the nominal the wrong way round.
- 914337: Fix for When an order is part picked, the picker name is not populated in the despatched tab.
- 914124: Negative mj_pickqty if cancelling a pick.
- 914249: Allow user to pick non-stock item with marshalling.

Added:

- Added WOLabelFile & WOLabelCopies into live link config to create WO file.

Bridge3

- 913408: Bin sequence on replen report now shows bin from w/h report ran on and then other bins in alpha order.
- 914216: PO receipt now populate customer name in comment field for CTRAN record, not the one user enter on HHD.
- 914681: Stock transfers or receipt through opera was not updating MB processing.

- 913478: sales order line value was changing after picking an order (Delivery at invoice stage)
- 913800: if no PO posted line will not prompt to print GRN message.
- 914245: Picker ID in pick his table was not always populating.

Despatch Manager

- 913236: Despatch manager was crashing if user add and remove "Courier" option with "System.ArgumentException: Column named Despatched Method cannot be found." error.
- 914000: Despatch Manager was erroring with memory leak error if you have "Courier" option enabled.
- 913523: Weight was calculated incorrectly for faceted item with factor of 2 (Fixed on header & lines screen).

MJMSOPKit

Added:

- Kit item with 0 qty in stock (for assembly item) will skip insufficient free stock message and allow user to create new sales order in opera, but will display insufficient stock message for not-kitted item.
