HHD

<u>v-4.83</u>

- 914862: On live picking Required, QTY was not showing correct decimals.
- 915017: Live picking with decimal & faceted item was showing required quantity and def. quantity in incorrect format.
- 914246: Added View Header button to view order header at any time during picking (not on confirm qty screen).
- 912638: Added calculated required qty for sales order in live Pick & Pack, if you have set unit volume in opera.
- 914271: Fix for: changed the stock look-up grid to remember the width of the columns on this screen. if the user re-sizes the column and closes the form the next time the form is displayed the width will be remembered
- 915045: HHD was crashing with format exception.
- 915048: HHD crashes with NullReferenceException when user click Pick.
- 915107: "Edit barcode" screen on stock lookup, the product code in the top left was restricted to 10 characters.
- 915048: If confirm bin and stock item is not selected under page 1, HHD was crashing with Null Reference Exception when user click Pick
- 915192: Fix for: Issuing same serial number for different product on live picking.
- 915045: On live packing if number of boxes blank and user press enter on scanner or click OK button HHD was crashing with format exception.
     Fix for: marking & unmarking confirm bin & stock was disabling both options.
     Fix for: On Stock transfer after scanning product BC it was not making live link call.
     Fix for: Live transfer with opera serial trace item was not scanning serial number BC on serial number field.
     Changed: Removed "Cancel" button from confirm total number of box screen on live packing.
     Fix for: Live transfer with serial item with "Destination bin at the end" was not prompting to confirm destination bin after confirming serial number.

New Feature:

- New feature is added in non-marshal picking to unpick picked lines, by clicking skip button which will display list of picked and unpicked line, select picked line and click "un-Pick" this will update required quantity.
- 914246: During pick process allow user to view header screen by clicking "View Header" button (Only with marshal picking)
- 914247: Amend scanner so that transfers process will always put none prefixed scans into the product code field
- 914250: Amend transfer screen to display default pick bin location on transfers screens.

LiveLink

<u>v-4.83</u>

- Bug Fix:
- Non-marshal picking with non-stock item was showing variable "DTEINV" not found.
- Issuing one of the WO component was issuing other component too.
- Completing sales order from despatch manager was taking too long, if user has different company letter set in rapmen live link was getting stuck in loop.
- Live picking with marshal or non-marshal was not populating correct values for Cx_value in CNOML table.
- Errors when non-stock items to be picked on scanner
- Fix for: Issuing WO Live link was failing with Property CXT_BIN is not found.
- Fix for: Completing WO, live link was failing with Property CXT_BIN is not found.
- Fix for: Stock movement with opera serial and batch item was showing failed to connect to LL.
- Fix for: Cx_value was (-tv) for GOODS_OUT & (+tv) for STOCK_VAL in cnoml table

- Fix for: Marshal picking was failing with "Exception occurred SQL: Column 'IH_DESP' is not found. In getorderlist at 852, System".

- 914031: Added delivery report to print delivery note from multiple sites, (Need to add WHPrinter in live link config)
- 913478: sales order line value was changing after picking an order (Delivery at invoice stage).
- 913289: Sales order with descriptive line was not auto completing after picking.
- 913805: Issuing WO component was issuing from FIFO bin even if user specifies different bin on scanner.
- 913952: Added sales order document number into DX XML courier file name for uniqueness.
- 914239: Fix for the PICK warehouse was posting into the nominal the wrong way round.
- 914337: Fix for When an order is part picked, the picker name is not populated in the despatched tab.
- 914124: Negative mj_pickqty if cancelling a pick.
- 914249: Allow user to pick non-stock item with marshalling.
- 14093: Was showing bin hold qty on picking even qty is on hold.

- Added:
- WOLabelFile & WOLabelCopies into live link config to create WO file.
- 14118: Priority 9 orders & back orders are going to priority 8 instead of priority 5.
- 14217: Over consumption of stock during the works order process

Bridge 3

v-4.83

- 913408: Bin sequence on replen report now shows bin from w/h report ran on and then other bins in alpha order.
- 914216: PO receipt now populate customer name in comment field for CTRAN record, not the one user enter on HHD.
- 914681: Stock transfers or receipt through opera was not updating MB processing.
- 913478: sales order line value was changing after picking an order (Delivery at invoice stage)
- 913800: if no PO posted line will not prompt to print GRN message.
- 914245: Picker ID in pickhis table was not always populating.
- 914805: After receiving PO through bridge and after that doing w/h to w/h transfer through opera shows correct transaction in MB processing.
- 914280: Increased field length in datadictionary in v4.83 multibins to set despatch date range for e.g. (09/10/18-15/10/18) in DM.
    - Fix for: Opera was crashing with Alias 'AUDITFILE' is not found if posting of PO fails.
    - Fix for: Opera was crashing with Alias 'PAUDITFILE' is not found if posting of PO fails.
    - Fix for: Posting PO through bridge was not prompting to print GRN.
    - Fix for: On Live stock movement with any type, live link was erroring with Error - VFP:Error: 1734 in Method: htmlcxbtrninward at Line: 3304 Message: Property CXT_BIN is not found.
    - Fix for: On Posting PO receipt to opera, opera was crashing with Property CXT_BIN is not found.
    - Fix for: On Posting PO receipt with foreign currency account was not populating CT_COST field correctly in CTRAN
   - Fix for: On Posting PO receipt with serial trace item was not populating CK_BIN & comment field in CTRACK table.
    - Fix for: Posting stocktake opera was crashing with Property CXT_BIN is not found.

- 915270: Live transfer from non-mb to mb w/h was not populating cxt_bchser in CXBTRN table.
- Bug Fix: After posting PO with foreign currency, when it prints GRN opera was crashing with Variable 'DC_EXRATE' is not found.

- 14120: The default pick face is being ignored and that the BULK locations are being selected, causing them to replen when not needed.
- 14040: Issue when searching in amend purchase orders opera crashes with 'Function Argument value, type or count is invalid.'

Despatch Manager

- 913236: Despatch Manager was crashing if user add and remove "Courier" option with "System.ArgumentException: Column named Despatched Method cannot be found." error.
- 914000: Despatch Manager was erroring with memory leak error if you have "Courier" option enabled.
- 913523: Weight was calculated incorrectly for faceted item with factor of 2 (Fixed on header & lines screen).
- 14091: DM was not showing total number of boxes picked & total number of pallets used for each order.
- 14082: A kit item quantity is restricted to the lowest amount of a component that is stock.

SOP Kitting

Added:
- Kit item with 0 quantity in stock (for assembly item) will skip insufficient free stock message and allow user to create new sales order in opera, but will display insufficient stock message for not-kitted item.
- 14091: Was not picking up cost for new kit.
- 14092: When crediting a kit via Opera the system is returning the stock for both components and assembled product.
