

HHD

4.59:

- 98377. Added the Dimensions to HHD for calculating timber. Option on HHD under 'specifics' called Dimension.
- 98566. Fixes for parking orders and ability to park order at the end of the order. Option on HHD under 'specifics' called 'Ask to Park after Pick'.
- 98553. It now asks for a bin using on PO's when using multi bin tracking. It Receipts from the passed Bin. KNOWN ISSUE – doesn't work with standard opera traceable items.
- 98596. Receiving PO changed to fill batch/serial field from barcode with separator
- 98701. Added supplier barcode to PO matching
- 97138. Fixed format exception on PO matching when using factored items.
- Corrected some button labels overlapping the icon on the main menu
- Changed PO matching to sort by due date
- Fix for when you scan combined barcode on sales order picking. If it was stock & batch without trace it would crash, now fixed.
- 98677. Added fix to match Purchase Orders Option
- 98679. Added new option under configuration\comms settings "Use Sales Order No as Filename" if ticked Sales Orders and Purchase Orders will send down one csv per order with the filename [type]-[Terminalid]-[Pickerid]-[orderno].csv eg; OD-1-Picker-ORD00001.csv Note for Purchase Orders there will be no picker option.

4.60:

- 98768. Font size on scanner fixed for customer
- 98769. Document number & order number on HHD with picking order fixed.
- 98771. When selecting an order on HHD, view the order on the scanner, if then you want to return to order list, not exit all the way back. I.e. if you only have one order then it allows you to go in and out. - fixed
- 98835. New check box added to advanced 3 tab "Confirm Reqs" if false confirmation step skipped
- 98625. Reads stock transfer details form barcode under option "Stock Transfer details from barcode"
- Added Live printing from Livelink to print routines
- Added password protection to Config Screen
- 98599. LG Barcode decoding Option for customer
- Moved ref2 field on stock transfers so that it is selected after comments rather than to Bin
- Fixed Issuing/Completing WO's with factors. (Was a crash converting to decimal)
- Added scan to Issuing/Completing WO grid.
- Fixed unique ID on creating Sales Order. (It was giving numeric overflow when importing into Opera)
- For a customer, extended the pallet reference so a size more suitable for them
- *Paul Added after, merged to branch* Fix for customer
- *Paul Added after, merged to branch* Included AI 11 production date field to GS1128 decoding. Date will be used as expiry
- Fixed for a customer, Modifications to software for the ability to park orders without using the pick warehouse
- Fix for Reference 2 field only allows 1 character then goes to next box.
- Fix for Allows input of different account without creating a new order

4.61:

- Removed the Company selection combo from front screen
- Changed the adding/editing of barcodes on stock lookup screen see development notes for details.
- Password Added to configuration.
- Re-Coloured application
- Added Parking to MultiBin.
- Fixed writing to @"lastorder.txt" when cancelling an SO on frmlivepicking.
- When scanning on completing WO, it now sets the trace type.
- Fix for Requisitions. Now reads in file and sets FROM bin when using MJMBRIDGE3

- Fixed editing the address for a customer
- On requisition form, the quantity has been limited to stop overflow exception
- Added option on receiving PO's to include line numbers or not.
- Merged with Paul's. Update on the colouring of the application and fixes to stock lookup.
- Stock requisitions. It now focuses on bin field if MultiBins is turned on.
- Stock requisitions. Factored items now remove from the list when line is completed. Decimals subtract picked quantity correctly.
- Added warehouse quantity to stocktake if sent from opera.
- PO Matching and delivery receipt. Resets suppliers barcode field when scanning another item
- When user creates PO on HHD > scan product > and if user want to include price > input price and click "Decimal button" on HHD it inserts decimal point into QTY field instead of price field
- After scanning few products if user try to edit or review PO, In edit screen it's not showing price which user has entered before, but when I import PO into bridge it shows all correct price for correct products, so it's just on HHD it's not showing price when user want to edit or review PO.
- When receive PO on HHD it's not showing decimal points in total picked field. for ex I have products with QTY 10.00, 10.000, 10.0000 and 15/000 (factored) but after receiving all items on HHD it shows total picked quantity - 126,000 instead 45.0000 or 45.0000 or 45.00 or 45/000 but when you import PO into bridge it shows correct decimal points for correct products, so it's just on HHD it's not showing correct decimal points.
- User on transfers is turned off but still prompts for a User, but if user turned OFF user on move it works
- When user creates S/O from HHD for decimal item, scan product > enter > QTY for ex. 0.55 so user input "0" first and use decimal button to inserts the "." it inserts the "." and Product field gets focused and both button and QTY field greys out so user cannot insert values after decimal, but if user uses key pad to insert decimal it works fine
- Added the fix for the decimal and slash buttons to movements, stocktaking and transfers.
- Added parameters back for stock lookup.
- Fixed marshal warehouse picking on multi-bins. (wasn't separating bin and warehouse with the |)
- On live picking it now adds the prefix on if first search fails.
- Fix For: CREATE TRANSFER LIST1- When user try to transfer between same W/H and BIN it creates transfer file without any error, so is it possible to prompt message box while user is creating transfer file because when user imports transfer file into stock transfer > post to opera and then it creates documents that "Cannot transfer between same Loc/Bin" which is fine. It's not a big issue but if we can improve in next version then it would be nice.
- If user have stock file on HHD it populates all the W/H name multiple times in W/H combobox on first screen when user creates PO from HHD
- If user wants to increment QTY by scanning BarCode for PO lines, by default QTY is 1 and after scanning second time it should be 2 but it's adding products current stock QTY into 1, for ex. I have all 3 CMAT products with QTY 270, 143, and 194 each so now if user scans cmat044 > on next screen to enter QTY if user scans BarCode agreeing to increment QTY it adds 1 + 270 and shows 271 as Rqd. QTY, but if I have stock QTY 0 for any product it works fine because it adds 1 + 0 = 1
- (This is with Match by Order and Line No under PO Matching) Order > Purchase > Receive > after receiving file > enter PO number > next > enter Ref.> next > it shows list for PO lines > scan Product code it's not doing anything (Not taking user to next screen to enter QTY) but if I untick Match By Order and Line No. or tap on PO line it works.
- On first screen it populates W/H name multiple times because user have stock file on HHD.
- On second screen after scanning product code focused moves to QTY field, now if user want to increment QTY by scanning BC it's not incrementing QTY but it's adding new line after each scan (if you go to review screen you will see multiple lines for same product)
- If user adds new BC > enter QTY > takes user back to previous screen to scan next product > takes user to next screen to enter QTY > now on this screen BC field is still showing previously scanned BC.
- Order > Sales > Create > On first screen it populates all W/H name multiple times because of stock file.
- Order > Sales > Create > On first screen still comes up with old colour scheme (light blue).

- Users have stock file on HHD, if user type in few chars from product code > press enter > it shows list of products to choose > user selects product > OK > returns to previous screen but this time it's not showing price field, but if user taps on product field > press enter on HHD it brings up price field.
- After creating SO on HHD > Review > Header Tab > change Customer account > detail tab > press enter> it takes user to detail tab and it removes previously saved price, but after changing customer account if user goes to detail tab without pressing enter on HHD it keeps previous price.
- When user pick SO on first screen by default picker ID is selected so if user press enter on HHD it opens dropdown > so focus moves to ORD field, press enter again to select picker ID but it inserts ORD into ORD field so if user press enter on HHD again it shows message box "no ORD found".
- If user scan W/H BC it inserts W/H name into supplier field, but if user selects W/H name manually it works fine.
- If user untick "User on Transfers" option in advance 2 setting tab, it's still ask for user, but if user untick "User on Movement" then it works fine for Transfer & movement.
- Because user has stock file with W/H details, when user tries to scan W/H BC it inserts W/H name into comment field, but if user selects W/H name manually from W/H combobox or without stock file on HHD it works fine.
- If I have LiveLink turned ON and if user starts doing stock take > scan product code > and shows message box > "Error In Barcode Scan Event : CMAT044 code 39 NullreferenceException" but if I turn OFF LiveLink and then do stock take it works fine.
- Fix for stock requisitions when using factored item and no stockfile/live link.
- Fix for scanning a barcode with *product quantity batch* for live picking.

4.62:

- Added the extra fields to stock requisition (transfers). They are Weight, no. Parcels, PTYPE and delivery method. (For customer)
- Fixed Stock Movements receipt when using generate batches & Live link. (For customer)
- Added ability to pick multiple dimensions when issuing W/O. (For customer)
- Stock Transfers with LiveLink will pick up default pick bin for the To Bin if none is entered. (For customer)
- Packing now returns correct bin quantities starting with correct bin (For customer)
- Parking traceability on live picking. (For customer)
- Added Traceability to stock requisitions. (For customer)
- Re-enabled label options on configuration. Must have come unhooked.
- Fixed converting ll stock to batch stock when no price set.
- Stock Req fix for back and ok buttons on serial/batch screen.
- Menu Option in configuration:
 - 1- Config > Menu Options > if you Untick Stock or Order > save it removes which is fine, but if you go back into config > menu option again by default both (stock & order) are ticked so if user now clicks ok it adds those again, because if user want to change something else in configuration and user doesn't even go into menu option and after changing other settings when user saves it bring those menu back again.
- PO
 - 1- PO with quantity 1 and on HHD if i enter qty - 1111111111 shows "OverflowException" and HHD crashes,
 - 2- After entering serial number for serial trace item for PO receipt it shows "NullReferenceException", but it's not crashing and also receiving correct QTY for each products.
- STOCK REQ.
 - 1- This is with confirm stock req in advance2 setting, enter Trans. Ref > Enter scan product > enter W/H, BIN and QTY on confirmation screen if user clicks enter on HHD without entering product code it shows "Invalid Stock Item" messagebox, which is good and if user OK messagebox it shows same message 60 times, but user still scan product code and click OK to messagebox and it allows user to scan bin and works fine, but if user continue clicking to messagebox it keeps coming back.
 - 2- I am not sure whether scanning product barcode should allow user to increment QTY for stock req? I have tried to increment QTY while QTY field is focused but it's inserting product code into BIN field

- SO
 - 1- With SO picking (Batch mode with "Display ORD List" ticked in HHD settings) after importing CSV it shows list of SO, so if user clicks view before picking on view screen there is check box "Show completed Lines" if user unticks check box it shows message box with "Format Exception", and it removes 1 SO line from list, OK to message box and tick checkbox again it populates all the SO line again, but it's not crashing.
 - 2- For live SO picking (with user select ORD), if user enters SO number without prefix > click OK button it does not add prefix ORD but if user press enter on HHD it does adds prefix.
 - 3- Live Link standard picking. Added a warning when picking 0. (For customer)
 - STOCK LOOKUP
 - 1- If user adjusts BIN QTY for 4 decimal item, for ex. I have QTY 54.0000 and if user set new QTY 54.5000 then it shows error on HHD, but it's not crashing
 - "Error - VFP:Error 39 in Method:processadjustmentype at line 814 message- numeric overflow. Data was lost(in thread 20).
 - 2- Small issue with updating BC from stocklook > BC > select main BC > press enter on HHD > it opens list > press enter on HHD again to select item > it opens list again, so user have to manually tap into BC field.
 - 3- If user update main BC it shows BC successfully updated, but if user scans old BC again it's still finding product, so I am not sure whether it should update main BC or add extra BC for that product.
 - 4- I have MIN. & MAX level set for 3 decimal product (3.000 & 15.000) now if I set new QTY level to 4.000 & 16.000 on HHD it shows bin updated successfully, now if I go to opera and check bin level it shows MIN = 0.000 & MAX = 0.020 but it should be 4.000 & 16.000, but now if I change bin level again with 4000 & 16000 it shows correct QTY level in opera (4.000 & 16.000), and same things happen with 4 decimal item, and with factored item I have bin level set to 5/000 & 25/000, now if I set new bin level with 4/000 & 15/000 on HHD it shows bin updated and if I check in Opera it shows 0/004 & 0/015 instad of 4/000 & 15/000.
 - 5- Set button for setting new Min & Max bin quantities does nothing.
 - 6-Search refs (cn_cat and cn_cat2) showing in the Grid. (For customer)
 - STOCK TRANSFER & MOVEMENT
 - 1- If user unticks "User on Transfers" option in advance 2 setting tab, it's still asking for user, but if user unticks "User on Movement" then it works fine for Transfer & Movement.
 - 2- For transfer (with or without LiveLink) it's not bringing down exp. date, if you try with batch mode it sets year as 2002, with movement when you import csv it's not showing exp. Date but when you post to opera it brings up correct exp. date (For customer)
 - Fixed scanning barcodes with product, date and batch for EAN14/13. Now used the full 14 characters, changed in Barcode Processing. (For customer)
 - After scanning product on QTY screen QTY field doesn't get focus, also "/" button is not inserting "/", If I enter "/" from on screen key pad it inserts fine and HHD crashes with quantity 5/000 for factor
 - ed items.
 - It finds the PO but when you scan product code it shows user message on HHD that "No outstanding lines/ORD lines for this product were found" (in LiveLink) but if I tap on product line it shows same error message, "VFP:Error: 12 in method: getbinsqty at line 489 message SEARCHREF2 is not found but if I tap on PO lines it allow to receive.
- 4.63:
- Made change so activity and account don't reset after quantity is entered on work sheets. (For customer)
 - Changed the traceable live pick. When picking a batch the '/' and '.' no longer highlights the whole quantity field after pressing the button. (For customer).
 - After scanning product on QTY screen QTY field doesn't get focus, also "/" button is not inserting "/", If I enter "/" from on screen key pad it inserts fine and HHD crashes with quantity 5/000 for factored items.
 - Stock Requisitions now works with terminal ID's. (For customer)
 - Generate batch no; now adds some random characters on the end to keep it random. (For customer)
 - Stock requisitions had bug where the first search would always look for MAIN warehouse. Fixed (For customer)

- 99116. Message pops up saying there are no outstanding lines found for this product when scanning supplier barcodes on Purchase Orders. (For customer)
- 99175. No drop downs on Delivery Method and Type on requisitions (For customer)
- 99174. Incorrect quantity coming through when part picking lines on Requisitions (For customer)
- Fixed Simple Courier and Number of boxes prompts on live picking wasn't working
- 99091. Stock Due in Need ability to assign stock coming in to a specific bin location at start not end of process
- 99168. Fixed various known issues in 4.62
- 99141. Fixed bug which allowed duplicate product + serial number when scanned on same order
- 99242. Fix for: Receive PO (with LL) MB+track. For decimal & factored items, (I have PO quantity 50.0, 50.00, 50.0000 & 50/000), if I receive 13.1250 in one batch, 17.1275 in second batch and 19.7475 in third batch, so on scanner it shows rounded remaining quantity instead of decimal quantity, but once imported to Bridge it shows correct decimals for each product so looks like it's just displayed on the scanner.
- 99242. Scan product > enter price > enter > it removes product description.
- 99242. SO Live Picking with ("Prompt for Boxes Details" & "simple courier" under Picking process) and traceable items now shows packing form.
- 99242. SO Live Picking with ("Prompt for Boxes Details" & "simple courier" under Picking process) fix for packing quantity field having 'Format exception' with factored items.
- 99242. Fix for when you set min. & max. level for bin, in quantity field if you enter "/" or "." it selects all text in text field. Also allows multiple of them characters
- Bug Fixes
- 99269. Prevent underpicking no longer working on live picking.

4.64:

- Build 1
- 99195. Added new functionality to stock transfers to allow min/max levels to be set if set to default pick bin tick-box is selected
- 99240. Added to allow return bin to be set when doing stock movement return
- 99299. For customer: now plays error.wav when wrong product, bin or invalid expiry date is scanned on live picking.
- Removed the following for general clean up purposes:
 - frmsaladBatchinfo
 - frmTDSLpickOrders
 - frmListorder
 - frmTimeout
 - frmBinCheck
 - frmBoxCount
 - frmCoppiceMovements
 - frmpackingdetails
 - frmLoadlists
 - frmPackorders
 - frmprinting
 - frmtotalboxes
 - LoadManager.cs
 - DeliveryTypeManager.cs
 - BridgeStructures.cs
- Build 4
- 99247. Re-worked Stock Transfers for the HHD. This includes live link, multibin and traceability.
- Moved some options (including new 'Product before To Loc' option for new stock transfers) to a new transfer tab on the configuration.
- Build 5
- 99407. Multiple fixes

LiveLink

4.59:

- Customer update for fix parking on scanner
- Issue and picking WO on HHD. Fixed for decimals and factored items. WOlivepicking.prg and stock movements prg.
- Various changes to protect to resolve duplicates.
- htmjmoisop for customer

4.60:

- Added Live printing from Livelink to print routines

4.61:

- Added new calls for viewing barcode list for stock codes
- Added parking to MultiBins. This includes changes to htmjmoisop and mjmooperapicking.
- Fixed parking where an instance was using itran line number instead of mjm line number.
- updatemjmtracking. Fixed where it was looking for nextid when updating mjm trace.
- Added UPPER() when adding batchno.
- Fix for parking decimals/factors.

4.62:

- Stock Transfers with live link will pick up default pick bin for the To Bin if none is entered. (For customer)
- Packing now returns correct bin quantities starting with correct bin (For customer)
- Parking traceability on live picking. (For customer)
- Added Traceability to stock requisitions. (For customer)
- STOCK REQ.
- 1- This is with confirm stock req in advance2 setting, enter Trans. Ref > Enter scan product > enter W/H, BIN and QTY on confirmation screen if user clicks enter on HHD without entering product code it shows "Invalid Stock Item" messagebox, which is good and if user OK messagebox it shows same message 60 times, but user still scans product code and click OK to messagebox and it allows user to scan bin and works fine, but if user continue clicking to messagebox it keeps coming back.
- STOCK LOOKUP
- 1- If user adjust BIN QTY for 4 decimal item for ex. I have QTY 54.0000 and if user set new QTY 54.5000 then it shows error on HHD, but it's not crashing
- Error - VFP:Error 39 in Method:processadjustmentype at line 814 message- numeric overflow. Data was lost(in thread 20).
- 2- If user update main BC it shows BC successfully updated, but if user scans old BC again it's still finding product, so I am not sure whether it should update main BC or add extra BC for that product.
- 3- I have MIN. & MAX level set for 3 decimal product (3.000 & 15.000) now if I set new QTY level to 4.000 & 16.000 on HHD it shows bin updated successfully, now if I go to opera and check bin level it shows MIN = 0.000 & MAX = 0.020 but it should be 4.000 & 16.000, but now if I change bin level again with 4000 & 16000 it shows correct QTY level in opera (4.000 & 16.000), and same things happen with 4 decimal item, and with factored item I have bin level set to 5/000 & 25/000, now if I set new bin level with 4/000 & 15/000 on HHD it shows bin updated and if I check in Opera it shows 0/004 & 0/015 instead of 4/000 & 15/000.
- 4-Search refs (cn_cat and cn_cat2) showing in the Grid. (For customer)
- STOCK TRANSFER & MOVEMENT
- 1- for transfer (with or without LL) it's not bringing down exp. date, if you try with batch mode it sets year as 2002, with movement when you import csv it's not showing exp. Date but when you post to opera it brings up correct exp. date (For customer)
- With livelink failing to connect, in livelink is shows error. "1734 in method appendtransactionrecord at line 394 message Property CT_EXPIRY is not found, but it's not crashing.

- For stock lookup it's not finding product and in LL it shows "VFP:Error: 12 in method: getbinsqty at line 489 message SEARCHREF2 is not found
- Error: 12
- Description: Variable 'STOCKREF' is not found.
- Line: 8846
- Program: CLSPUBLISHER.PRODUCEREPORT
- Line of Code: "*" + ALLTRIM(UPPER(stockref)) + "*"
- For stock lookup it's not finding product and in LL it shows "VFP:Error: 12 in method: getbinsqty at line 489 message SEARCHREF2 is not found
- Error: 12
- Description: Variable 'STOCKREF' is not found.
- Line: 8846
- Program: CLSPUBLISHER.PRODUCEREPORT
- Line of Code: "*" + ALLTRIM(UPPER(stockref)) + "*"

4.64:

- Build 1
- 99195. Added new functionality to stock transfers to allow min/max levels to be set if set to default pick bin tick-box is selected
- 99240. Added to allow return bin to be set when doing stock movement return

MultiBin and Tracking

4.59:

- 98553. Includes changes for a customer to pass ref2 and comments to the tracking table and allow a bin to be specified when matching against PO receipts.
- 98377. Calculate dimensions for soft and hard wood, additional field in name to hold x,y,z dimensions and print PDF when creating new works orders or reprinting works order documents
- 98722, 98723, 98724. Customer specific fixes; only take effect if the status.txt file exists in the opera 3 folder

4.61:

- Fixed the GRN's creating and assigning when receipting PO's
- Added compatibility for consignment stock on MultiBins.

4.62:

- 1- When user opens enquiry screen it shows all the transaction QTY with 4 decimal points for ex. -5.0000 for 4 decimal item & -0.5500 for factored item & -0.0005 for single items, but if user clicks any line it changes to correct format for all lines for ex. -5.0000 for 4 decimal items & -5/500 for factored items & -5 for single items.
- -Fix for comments refreshing on Stock Movements.
- -Now displays expiry date in the correct text box.
- -Uppers stock codes or receiving PO's, SO's, transfers and movements.
- **HD98988**
- (1) - Changed the stock take process so that tracked items will post receipts or issues into the tracking table to correct batch balances.
- (2) - Uncounted batch numbers that are zero-ised will be updated to show zero in stock
- Fixed batch mode stock transfers with latest HDD. It wasn't reading in correctly (needed new version of importCSV).

4.63:

- 99170. Various fixes for known issues with 4.62

Bridge

4.59:

- 98566. Index/Tag updated for (customer) parking without marshal warehouse. Uses live link. MJMLib is now needed.

4.61:

- 98896. Fixed bug for customer where posting multiple despatched sales orders in a single file was not generating delivery numbers for all orders
- Fixed bug found while testing the above where posting sales order despatches on foreign currency customers crashed with a numeric overflow.
- Added warehouse quantity to 'Send Stock Details'.
- Fixed printing report for stocktake. Changed export to excel to include all rows so the uncounted can print too.
- I have SO with 3 different customer account and after importing to bridge to create new SO it shows all product lines under 1 customer account instead of 3 different.
- Small bug, I have 3 SO with different comments in ORD list tab , so when user select first line it shows comments for first SO and if user clicks on second SO it's still showing comment for first SO but if user change tab and come back to ORD list tab it shows comment for correct SO.
- After post to opera it asks user to print del. note, I have 3 SO in one file and it only prints out 2 del. Notes (This is with multiple PO with different suppliers in one csv file) After posting to Opera when it asks user to print PO Ord it does print out PO order file but it prints 1 copy and in print copy supplier account is from first PO, number of PO lines same as last PO with third supplier and product code, name is first product from first PO.
- Import consignment file into Bridge > Create Order File > it shows dialog box to select W/H > but before user select W/H and click OK it creates ONxxxx.CSV file into bridge csv folder, but it should create .stk and ON file after user clicks OK

4.62:

- With LiveLink fail to connect, in LiveLink is shows error. "1734 in method appendtransactionrecord at line 394 message Property CT_EXPIRY is not found, but it's not crashing.
- BridgBC > Send PO details > select PO > Click print label > on next screen > print label > publish on screen > opera crashes with below error "Variable 'STOCKREF' is not found., line 8846 clspublisher.error program CLSPUBLISHER.PRODUCEREPORT
- Opera crashes when try to import stock transfer file, please see error log. once close > next error shows "Object GOAPPLICATION is not found" ERROR- UNHANDLED STRUCTURED EXCEPTION ERROR NON 1234, MESSAGE SUBSCRIPT IS OUTSIDE DEFINED RANGE, CURRENT FILE- IMPORTCNTRL

4.63:

- 99168. Fixed various outstanding items from v4.62 for full list see know issues for v4.62

4.64:

- Bug Fix
- 99278. 2 For PO Receipt it's not showing transaction reference in MJM Trace enquiry. (note this also didn't put reference in stock transaction reference field)
- 99275. 1 On consignment stock, when asked for consignment warehouse before generating files list contains consignment warehouses twice.
- 99275. 2 Cancel button shows program error on consignment warehouse selection screen

Bridge 3

4.59:

- 98377. Added PDF option to stock lines which can be printed from the works order screen if set
- Added 3 dimension fields to stock Options form for a customer quantity calculation
- 98694. Changed stock transfers to produce PDF if associated document number is in ct_ref2 field and document is at document status. Also reduces document line quantity by amount transferred.

4.60:

- Added replenishment report changes for customer

4.61:

- Added BINNO field to mjparking table.
- Added consignment stock to MultiBins. This required tables, forms etc being ported. It sends the default issue bin down to the scanner for the "From" bin.
- Fix for consignment stock where it was creating files and archiving before confirming the final ok.
- Fix for container list showing debug browse window when importing the container list.
- Fix for stock transfers where comments text box was not refreshing when changing lines on grid.
- Fix for: WHEN USER CHANGES TRANSACTION TYPE IT CLEARS BIN NUMBER SO USERS HAVE TO MANUALLY TYPE IN BIN NO. But if BIN column's cell is selected or focused then it's not changing bin number.
- Fix for: CREATE TRANSFER LIST1- When user tries to transfer between same W/H and BIN it creates transfer file without any error, so is it possible to prompt messagebox while user is creating transfer file because when user imports transfer file into stock transfer > post to opera and then it creates documents that "Cannot transfer between same Loc/Bin" which is fine
- Fixes for consignments. Only correct post button shows now and should be anchored properly.
- Fixes for consignments. Consignment (SG) file reads in if comments are omitted.
- Fixes for consignments. Takes correct warehouse bin.

4.62:

- Added the extra fields to stock transfers. They are Weight, no. Parcels, PTYPE and delivery method. (For customer).
- Added traceable fields for parking table.(For customer)
- Changed the total value for consignment stock. (For customer)
- Added mark all and reverse button to consignment stock. (For customer)
- Use other warehouse when createing sales order from consignment stock. (For customer)
- 98985: GRN not printing description if product code is not a supplier product, now prints name description if no supplier product setup for this code.
- Fixed decimals and factors showing on stock consignments.
- Fix for file format on stock consignments.
- STOCK TRANSFER BATCH MODE
- 1- Import stock transfer file into Bridge > action > print > print on screen > close print screen > it removes comments, but if user clicks on any line it comes back, but it's not a big issue.
- 2-After print and extra PDF generated (when transfer Ref2 is linked to DOC) it now takes into consideration the filter applied. (For customer)
- Fix for comments not changing on stock movements. Again.
- Added ct_expiry into fields for live transfers and movements.

4.63:

- 991698. Fixed various outstanding items from v4.62 for full list see know issues for v4.62

4.64:

- Build 1
- Send PO Details > Select 3 new PO Line > Print Order Report > Publish on screen
- In report it shows qty with wrong decimal for 1,2,3,4 decimal & faceted items.
- if i select po with 3,4 decimal & faceted items it shows qty for all 3 products with 4 decimal
- if i select po with 2 decimal & 1 cmat items it shows qty for all products without decimal
- if i select po with 1 decimal & 1 cmat items it shows qty for all products without decimal
- if i select all 3 po and print report it shows qty for all products from all po's with 4 decimals
- Stock Requisitions. BridgeBC > Stock > Stock Requisition > Opens select W/H form, so now if you click cancel or "x" it still opens stock requisition form instad of cancelling the process.
- I have SO with 2 lines (1 decimal item & 1 camt item)> import csv to bridge > go to bin detail tab (I have 2 lines in bin detail tab)> click show stock position > it shows bin stock from Order detail instad of Bin detail.
- Import SO CSV file, Action > print > On SO Despatch report it's not showing SO number & account number.
- Import SO csv file, Order Details tab > unmark few lines > go back to Order List tab > action > print > Only Exceptions
- Publish on screen > Prints out correctly > close print screen > Opera crashes with "Record is out of range" error log "SO-Print-Screen-Closing-Error.pfd" is in known issue folder
- Build 2
- HD99201 Added functionality to edit the price when receiving items on po's.
- Fix for FIFO date is not showing when you do stock adjustments from stocktake. (Customer fix)
- Fix for not showing correct pick bin while picking sales order live. (Customer fix)
- Build 3
- Multiple Fixes for 99409:
- Fixed: Order Detail tab > Action > Print > Only Exceptions > Shows msg box "No line to print" > OK to msg box > clears all the PO lines in Order Details Tab.
- Fix for BridgeBC > Send PO Details > OK to open send PO details form > select PO lines > Print Labels > Publish on screen > Close Print screen > Action > Mark All > Opens file dialog > if user click Cancel Opera crashes with error "No table is open in the current work area".
- Fix for consignment, when you create order file from consignment it's not taking sales account from consignment w/h, for ex. my consignment w/h is TEST and I have set sales account for this w/h, so after creating order file it's taking sales account from MAIN instead of TEST
- If you resize form, export to excel & close button moves on grid.
- 99276: Multiple bug fixed.

Stock Take

4.60:

- 98649. Changes for Protec:
- Notes appearing on all the 'Detail' reports and excel exports.
- F7 'Mark All' now is called 'Reverse All' and is fixed.
- New Control record is now created after clearing all batches.
- 98649. Changes for Protec:
- Fixed printing from memo screen.

4.61:

- Added reference of stocktake review screen for uncounted. This adds ability to change all the references for uncounted lines.
- Fix and error when closing the stocktake review and transaction was open.
- Fix for: Is impossible to display messagebox when user try to post posted or finished batch that "batch is already posted".

- Stopped batches with nothing to post showing on post table.

4.62:

- Copied from 4.61 Released version to 4.62 development testing. - 10/05/16

4.63:

- Used serial (duplicate) now is no longer automatically set to post.
- Export on enquiry now uses serial.
- Fixed Export on enquiry when blood field is .NULL.

MultiBin Core

4.62:

- 1. Xbins Trap Error 39 Numeric Overflow, for customer
- 2. XBins Audit – for customer
- Fixed for Batch/Serial Items
- 3. Population of SOP Field(s) in CTrack - this fixes issue for customer
- Extra fields have been added to the CTran Object - .SODel, .SOInv, .SOCdt and .SOPopulat, .SODel, .SOInv and .SOCdt will carry the CK_Delivry, Ck_Invoice and Ck_CrdNote and .SOPopulate contains a combination of “D”, “I” and “C” to indicate which “dot” Field(s) to write, those not specified .SOPopulate are blanked
- Ck_Document is always written from .SODoc
- NOTE: Ck_Delivry is no longer populated from Ct_Referen, so to achieve this set .SODel to Ct_Referen and set .SOPopulate to “D”
- 4. Cxt_Comnt in Movements

Courier

4.63:

- (For customer) Fixed service ID and label heading now loading correctly on despatches form.

Bridge Desktop

4.64:

- Fix for:
- 99184. View pick list report in Despatch Manager used to fit on one page when printing portrait but on the latest version it does not fit

Despatch Manager

4.64:

- 99178. When use change SO priority to 7 in "Available for Pick" it now changes SO line colour to green.
- 99353. Fix for, View pick list report in Despatch Manager used to fit on one page when printing portrait but on the latest version it does not fit
- 99280. Multiple fixes.

Bridge Track

4.64:

- Build 1
- Action > print > in tracking report it's not showing QTY.

- Once Enquiry result form loads select any line with 4 or 3 decimal items > go to Comments tab and come back to general tab and all the qty shows with 4 decimal or 3 decimal and same with factored item
- 99187. Fixed for When posting through an invoice from the proforma, it is not taking the stock from default pick bin
- 99277. Multiple bug fix.

Tracking

4.64:

- 99278. Multiple bug fix.
