

HHD

Build 1

- Added the new transfer system with the option to move everything transferred in with a single button.
- Marshal picking now only works with Multibins. Edited in the configuration form.
- 99434 for customer. The Stock Requisition process is not recognising customer barcodes.
- 99439 for customer. Would like to pick what requisition file to pick on the Handheld. Currently they are all on the server on the same name
- 99006 for customer. Uses correct account when creating the new sales order.

Build 2

- Added the Net History to stock lookup. Please see Development Notes folder for more details.

Build 3

- 99407 MJM. Known issues carried over from 4.64.

Build 4

- 99159 for customer: Able to Duplicate Auto Generated Batch Numbers
- 99476 for customer: In new live Despatch would like to review the batch numbers of what has been scanned in the review data screen before posting through the data.

Build 5

- 99358 Error when Printing Box Labels, NULL REFERENCE EXCEPTION

Build 6

- Fix for Serial/Batch on transfers with Multibins. There was an error on the if statements meaning it never asked for the Traceability fields.
- Moved Requisition options on Configuration to Advanced 2 tab.
- For customer: Added Requisitions option to Advanced 2 Tab giving the option to select the requisitions file or not. This is called 'User Picks Requisitions'.

Build 7

- Separated the skipping and parking options.
- Fix for requisitions. Now incorporates the scanner ID when checking for file to import.

Build 8

- 99159: Fix for duplicate auto generated batch numbers.
- 99461: Fix for "Report to print out with product code/batch/description and quantity of what has been picked as a load list for certain customers."
- 99476: Fix for "Would like to review the batch numbers of what has been scanned in the review data screen before posting through the data."

Build 9

- 99507 Added a screen to PO matching for live link showing the name of the supplier, supplier Ref and the two PO header comments.
- Fix for PO matching where searching by a supplier then for the PO wouldn't work (it didn't reset the select by enum).
- Fix for WO screens (pick/complete) for the factored items and using the '/' and '.' buttons not working for the quantity field.
- Fix for not showing early receipt message if I have PO line with future date.

- Fix for: doesn't show all the PO lines if different required dates. For example, I have 6 lines on PO 3 lines with today's date, 1 line has past date and 2 line has future date, so it's only showing lines with today's date.

Build 10

- STOCK TRANSFER (WITH 2-WAY)
- 1 - after scanning products on FROM tab, if I go to review screen and try to edit any line it shows error "There is no row at position 0" | if I click ok HHD crashes.
- 2 - if I try to delete item from review screen it's not deleting anything and not showing any error.
- 3 - on FROM tab if I scan bin which has no quantity | scan product | enter quantity to transfer | now showing any user message that bin has no quantity to transfer and when I go to TO tab and try to transfer now it shows insufficient stock of in bin from (bin number), so it should display this message on FROM tab.
- 4 - on FROM & TO tab it's only validating w/h & bin for example, if I enter 1234 or blank as w/h & bin | and scan correct product it shows invalid product but not showing any user message on incorrect w/h & bin.
- 5 - if I leave reference blank and try to transfer it shows user prompt "reference cannot be empty" when you scan w/h, bin and product on FROM tab, it's not showing this message when user press enter on reference screen.

Build 11

- Live Sales order picking fix. When under picking the required quantity will now be correct for standard, multibin and trace.
- Removed the unfinished bin replenish button.
- Fixed the configuration, more specifically the 'Prompt for Box Details' option.
- several fixes for not showing correct message box when picking sales order live.

Build 12

- Fixed crash for match PO. Index was out on the orderline constructor.

LiveLink

Build 1

- Added the Net History to stock lookup. Please see Development Notes folder for more details.
- PDF image of invoice being stored correctly on the ctran records.

Build 2

- 99461 for customer: Added packing report.

Build 3

- 99159: Fix for duplicate auto generated batch numbers.
- 99461: Fix for Report to print out with product code/batch/description and quantity of what has been picked as a load list for certain customers.
- 99476: Fix for Would like to review the batch numbers of what has been scanned in the review data screen before posting through the data.

Build 4

- 99507 Made a change for customer to allow for new PO matching screen showing comments and SAME company name.
- Fix for customer on transfers, missed some error handling

Multibin and Tracking

Build 2

- Fixed for On traceable enquiry, editing a traceable line from the Action button then cancelling (after a change has been made). Now ignores change.
- Fix for, Not showing tracking record with live mode, once you finish transfer from HHD it shows correct batch number in live link screen, but when you check in MJM Trace it's not showing, also it's not showing any entry for live transfer in z_mjmbatches table.
- 99410: Fix for:
 - tracking report, it's not showing QTY
 - On general tab select any line and go to comment tab, come back to general tab quantities for all the lines shows with whatever the line was selected in general tab.

Bridge

- 99408: 1- I have stock file on HHD, create order file from bridge, creates 1 SO csv & 1 stockreq.stk file, when you import stock file on HHD it's not showing decimal or factor for decimal and faceted items.

Bridge 3

Build 1

- 99435 for customer: If the in stock level of the Consignment is 0 but you have a counted quantity of 10, it will not allow you to tick the check box to enable posting if you have a re-order level entered
- 99437 for customer: Added account to file now so HHD could pick it up. Call description: Would like to pick what requisition file to pick on the Handheld. Currently they are all on the server on the same name

Build 2

- 99201 added amend price to PO Receipts screen.

Build 3

- 99409: Fix for, Opera was crashing when you do stock movement (type issue & return)

Build 4

- 99375 & 99378 - added F5 hot keys to stock batch review screens.

Build 5

- Changed PO Expiry date to yyyyymmdd format as it was in dd/mm/yy format which generated an error on the HHD if wrong region setup.

Build 6

- STOCK MOVEMENT (BATCH)
- 1 - when you import stock movement, it does not shows user name for first line
- 2 - if you print, export to excel it removes comments but once you select any line or click on grid control it populates comments back.
- 3 - Post to Opera | Click Yes to message box | Opera crashes with "TMJ_CTRANREC-O is not an object" crashing with receipt & issue type
- 99375: Fix for, added PO Processing F5 short cut is missing to change post status
- 99378: Fix for, added SO Processing F5 short cut for change post status and for display legend
- 99372: Fix for, added Stock Movement F5 short cut

Stock Tracking

Build 1

- 99487 Serial Numbers not being logged correctly on some PO Receipts
- Bug Fix Stock Transfers and Stock Movements file formats not matching, updated to correct

Bridge Desktop

Fix for:

- When viewing the transaction file the user name is in the batch field.
- The batch/serial number is not recorded in the table
- The stock take reports don't show the totals and the formatting needs to allow for 4 decimal places
- The footer needs to be brought up to date.
- The wash needs removing.
- The tabs need rounded corners removing.
- 99178: Fixed for, there is no line at "0" position
- 98425: Fixed for, desktop to handheld config
- 99370: Fixed for, Bridge Desktop: the tabs need rounded corners removing
- 99369: Fixed for, Bridge Desktop: the wash is now removed
- 99368: Fixed for, Bridge Desktop: the footer is updated now

Despatch Manager

- 99280: Fix for, if user selects SO line and click Remove it shows messagebox ORD removed but ORD is still in same tab
- 99178: Fix for, select "Total" row at the bottom of SO list in Available for pick > allocate picker > accept despatch manager crashes getting bellow error. There is no row at position 0.
- changed pick list report to fit on one page when printing and not to print a black page at end

Tracking

- 99411: Fix for,
 - Action | Print Details | prints out without any error, but showing wrong decimals or faceter in quantity.
 - Action | batch balance | summary | detailed | shows 2 decimal for 3 decimal item and 3 decimals for 4 decimals item in To w/h field. But works fine with 1 & 2 decimals and shows correct quantity in from & to w/h.
- 99278: Fix for,
 - on enquiry result > action > print batch labels > print labels > not printing anything, just shows user message "Reprint Label?"
 - For PO Receipt it's not showing transaction reference in MJM Trace enquiry

MJM Print

Build 1

- 99456 Added Serials to the MJMPrint bespoke.
