

BRIDGEWMS

MJM Launch their new Warehouse Management System (WMS)

- A modular system to manage your warehouse - comprising of a series of managers to enable ease of use
- Full integration into Opera 3, in two versions: Standard and Advanced
- Will integrate with Opera SE (subject to final mapping details from Pegasus)
- Integrates with other ERP systems, as well as being a standalone, self-contained system
- Developed with the latest tools in the .net environment, utilising all of the benefits of SQL and barcode & RFID technologies
- Faster - "live integration to ERP": real time receipting, stock management and despatch
- Ideal for all warehouses, whether small or large, with single or multiple sites
- User configurable screen data: "putting the right information in your hands"
- Designed to work with Windows Mobile 6.5 & Android hand-held devices and Windows 10 for tablets

Configuration Manager

- Manage devices and printers
- Manage users
- Manage system configuration
- Manage ERP interface

Stock Manager

- MultiLocation and warehouse
- Fifo and expiry date stock rotation
- Serial and batch number tracking
- Real time updates to WMS & ERP

Despatch Manager

- Allocation of pickers and packers
- Part picking, marshalling and holding
- Integration into courier systems
- Multi-document production: delivery notes, packing lists and labels

Receipt Manager

- Receive goods by PO
- Receive goods by container
- Receive goods by supplier
- Put Away
