

### JOB COSTING

You are preparing to manufacture a product; your next step is to allocate each element to the job... Job Costing synchronises multiple tasks required to complete an order by applying job cost codes to each work item. From a hand-held device items can be issued and returned to stock or moved to a different location using a specific job code. Job Costing decreases lead time because manual data entry is not required and increases efficiency because job and cost codes can be saved as defaults for future orders.

#### Issues & Returns

Stock Movements are a standard feature within Bridge and can be performed from any hand-held device. Incorporating the Job Costing module into the software package will further increase the accuracy of issuing and returning items to stock. The Job Costing module enables additional information including job number and cost code to be prompted when completing a movement.

#### Order Information

All the information you need to complete an order accurately and efficiently is saved and ready at your fingertips with the Job Costing module. All Job Costing information can be pre-set, meaning that ample time is saved as the need for manual data entry is no longer required.

#### Job Numbers

Undertaking a Stock Movement with the additional application of job numbers and cost codes is easy and can be completed from a hand-held device. Tagging this additional information to a job is simple with an additional tab on the user screen of the Bridge software. Multiple tasks can be allocated to different jobs using different cost codes. Any job or cost information can be reviewed and edited on the PC when sent back to the server.

#### Options

Information entry repetition will no longer be the reason for wasted time as the Job Costing module provides the option to set default values for cost codes and job numbers. Phases can be set in the configuration option on any hand-held device from within the Bridge software. These defaults will be applied to all jobs unless they are over-written on the costing tab and these options can be edited from a PC.
