

Pharmacy

The Bridge Pharmacy software provides the user with a drugs reordering system. A Stock Take can be undertaken on each ward and the data is transmitted to the ERP. Data can be collected, reviewed, edited and transmitted via the hand-held device.

Collect Data

Data is collected first, by keying in or scanning the ward barcode using the hand-held device. After this the drug details are entered, followed by the quantity.

Review Data

Data can be reviewed at any time and, when required, a list of the items that have been scanned or manually entered will be presented. The list can be viewed by moving up and down the scroll bar.

Edit Data

Data can be edited by selecting the required record. The ward code, drug code and quantity can be amended manually or by scanning with a hand-held device. The edited data is then saved, ready to be transmitted.

Transmit Data

When the data collection is complete, data transmission is confirmed and the data is sent back to the system.
