

BRIDGE WMS

WMS Version 1.10

Bridge WMS Version 1.10 Development Release Note

Bridge WMS Desktop

- WMS was crashing if the user sets overdue and critically overdue days to "0" in despatch manager.
- Allow user to search with non-exact search option for shipments.
- On S/O picking correct address was not showing during picking on header screen.
- Changed check-box text to allow live adjustment, if this is selected it will allow user to do live stock adjustment through stock look-up.
- Creating S/O or P/O, after adding new sales or purchase order line focus was not moving back to product combo.
- Added DX courier
- New option is added to add "Total Order Weight", this will display total order weight, for e.g. if product weight is 0.85 and order QTY is 20.00 it will display On live transfers if user leave from or to bin blank process was getting stuck in loop on set bins Min. & Max level screen.
- On PO receipt if user select "NO" to print label it was still printing labels.

Handheld (HHD)

- On live picking by line, if product is ROLL or EACH it will pre-populate print copies same as confirmed QTY, but if product is PLM it will always default to On stock movement, leave W/H field blank and press enter on scanner, HHD crashes with null reference exception.
- Allow user to do put away process within same W/H & Bin
- HHD was crashing with format exception, if user enter non-numeric chars into port text field under live link config and save
- If entering an incorrect batch number HHD was showing 2 messages.
- HHD was prompting user message at the end of packing if user packs an order with incorrect batch.
- Enhancement on packing process.
- On Stock movement HHD was not showing user message if W/H field is blank.
- Added new feature to select from bin on stock transfer send list.
- Company letter text box is removed under live link config.
