WMS Version 1.37

## WMS Version 1.37 Development Release Notes

### Desktop Changes:

- Sales Order Despatched Packs Label Trigger added. Also added functionality to print from Deliveries Tab.
- Sales Order Despatched Packs Label Trigger amended to include pack quantity on CSV output
- Counting stocktake lines locks bin from being changed
- Barcode Sync Disabled by default to reduce system strain, config option added
- Fixed 'Despatch Multiple' functionality SQL error
- Picker added to pick label output and pack despatch label number now starts from 1 not 0
- Added custom name field to handheld devices on handheld config screen
- Changed bin freeze on stock take to lock all bins and products on stocktake
- Inwards transactions, when no default product put away bin, use warehouse in.
- Picking Get Orders sorting dropdown added. List assigned orders first added.
- Added option to update Landed cost on Shipment Lines.
- Fix for Bulk Transfer in WMS.
- FedEx courier service 'StreetLines too long' error fixed, now using county as 3rd line rather than concatenating with the first line
- Added option to toggle SSL within SMTP emailing in BridgeWMS
- Fix for Work order complete cancelling halfway through doesn't cancel the process.
- Picking - cluster lines load correctly from sales Order ID, can be used with pick by zone (separate buttons). Order Table adjusted.
- NLog & Regular Expressions updated for security reasons
- Stock Movement Receipt correctly uses std/avg cost now instead of last cost
- 'Print Pack Labels by Line' added.
- Picking 'Pack by Line Grouped Delivery' added to use a single delivery.
- Stock Movement Receipts are now updating Opera last cost and using the standard cost for transactions instead of the last cost.
- Unconfirmed trx from WO to use default put away bin of the product on the receipt of the finished product.
- Courier Customer Info now treats the following values as default/place holders ",-#."
- Batch Label CSV output support has been added
- Purchase Order Line Tab date filter now has a required date to filter against the line required date
- Fix for - unable to put stock in bin as contains another product.
- Added 'Aisle' selection to the stocktake template creator.
- Adjustment to use default Put Away bin on Autoconfirm transactions.
- Sales Order Info Label CSV output now replaces order comments and instructions new line with a space
- Despatch Manager Performance degradation addressed by adjusting ASAP highlighting behaviour to be tied to the 'Is Asap' field being displayed and true

- Re-Assigning a picker to an order will now produce a Cluster Label (only 1, not 1 per line)
- Pick Route Editor crashing with large bin count corrected. Also corrected logic that prevents bins being added to the same route more than once
- Fix for Stock is showing in under only one batch when there were multiple on Stocktake CSV upload.
- Adhoc Printing fields, Adhoc2 and Adhoc3 have been enabled on the desktop for CSV outputs.
- Option added to only show Adhoc labels in the Adhoc printing area on the desktop
- Added comments fields to 'Edit count' form on the stock take lines.
- Batch CSV label 'description' field was pulling the product code in, corrected to description
- Sales Order sorting for HHD was in reverse for priority, now ordered in ascending order
- Option added in Work Order manager to enable default to put away bin as Receipt bin for WO complete on desktop.
- Sales Order descriptive lines no longer become empty in WMS after a delivery occurs
- Set a default package type to courier service.
- Fix for creating a package code while package on desktop.
- Pack List Document (PackNote.XML) has been amended to include pallet dimensions where appropriate and the pallet count logic corrected
- Work Order Completion no longer updates the discard quantity to the order quantity - completing quantity if partial completions have occurred prior.
- Picking, removing parked flag when entering pick. Prompt on cancel. Courier spinner defaults to courier service package type then hhconfig default.
- New config added to display Courier OR Courier Service in SO.
- Added functionality to Print the WO label from the Work Orders tab
- Create Pack, hardcoded 2 changed to label Qty for pack label trigger.
- IQ Sales Order Total Available Quantity now includes stock in the same branch rather than just the same warehouse
- Option to Disable barcode sync from WMS to Opera added.
- Serial Label, orientation and scaling option added to BridgeLogic.dll.config file
- Adhoc2 and Adhoc3 fields added to Adhoc Printing functionality on desktop
- UPS API Courier Integration
- Work Order Lines will no longer update if there are pending WO Transactions to be posted to Opera to prevent incorrect HHD processing
- Warn On Duplicate Scan, new Stock config added. Receive and Movements Receipting.
- Packing - Default to courier printer.

### **Windows Mobile**
