BRIDGE WMS

BridgeWMS Version 1.38

WMS Version 1.38 Development Release Notes

Desktop Changes:

- Create Work Order functionality added to WMS
- Warning message will be displayed on authorisation of stocktake for pending failed transactions
- Reassign picker now prompts if you want to produce a label per line
- Adhoc CSV now includes the first barcode in the output
- Simple WO importer added to FTP Processor to create Work Orders via the BOM
- Added Courier Despatch label trigger for courier label outputs to route to other printers and quantities then the delivery note
- DX Courier now correctly limits the address line 1 to 25 characters
- DHL Express API- Dangerous goods shipping
- Added Works Order Report and generation for all orders filtered on the grid functionality
- DHL courier now supports Magento/web import orders via the sales order number instead of document number
- Tufnell's courier correctly applies weight rounding now to the closest integer
- Exclude dormant bin from Replen Report
- Bin Group Tab now has functionality to print bin labels for all bins within the group
- Print Labels After Pick, if multiple picks and all using the same printer and label copy count then the rolling "1 of X" will be used in outputs
- Configurable separator added to label outputs so CSV can use comma or pipe
- Fully Despatched Orders are now no longer visible in the held orders tab
- KCLink Orders can now use the customer email as a fallback if missing from order instructions via new BridgeLogic.dll.config setting
- Work Order Edit Functionality added
- View components of Assembly products from Works Order>Products tab functionality added
- Option to 'Add bins' to bin group which allows you to select all required bins at once
- Showing error message when you Approve the stocktake saying there are failed transactions against this product
- Fix for Error when trying to despatch multiple while "out" bin is being used for stock take is an unhandled exception error
- WO "Created by" field now synced to WMS from opera
