WMS Version 1.39

WMS Version 1.39 Development Release Notes

Desktop Changes:

- Purchase Order Line Receipt Tab colour key added and new highlighting colour for receipts over the required quantity
- Serial despatches now populate Opera traceable fields in the correct format, also improved updating of delivery records to handle 70 serials at a time rather than 1 by 1
- Auto format expiry date and manufacture date on serial entry form
- Fix for Stock take adjustment discrepancy based on Allocations
- Added a field to the Magento CSV to allow us to specify the country type of the delivery address
- Changed handhold config to disable order list checkbox when Consolidated picking is enabled
- Explicit Supplier Shipment Lookup option added to allow HHD lookup alternative
- Improved Formatting for error message showing in UI for DHL ParcelUK Web courier
- Configurable retry limit added to Unconfirmed Transactions
- BOM Adding and deleting Lines will be reflected to WMS
- Added SO Despatch Sync start time setting to DataSync to limit despatch syncing time to occur from a given period onward
- Prevented infinite receipt of non-stock lines and fixed inability to cancel the picks of non-stock lines
- Work Order Creation allows for 0 quantity BOM component to be used via import
- Work Order Costing fixed for orders containing Non-Stock Lines
- Work Order costing fixed for orders with labour lines
- PalletWays Web Courier now correctly registers notification requests on the portal
- New configs - Unassign Packer on pack / apply to partial pack
- Resized handhold config screen to better fit on screens
- Added explicit supplier lookup functionality to allow supplier to be used in combination with shipments on the scanner (forces shipment receipting to be done via shipment reference)
- Fixed Work Order Receipts for non-unique batch numbers across products was causing quantities to increment on wrong products
- Print After Pick label trigger type corrected to data model
- DX Web courier now sources the contact from the order contact before falling back to customer name
- McMurrays courier added support for the 'DDAY' service for future dates
- APC and APCH courier now source the email from the contact email before falling back to customer email
- New setting, 'Use Default Printer' added to labels so the default printer will always be used regardless of the printer selected if prompted (used for multiple identical label triggers)

- Adhoc printing on desktop now passes the label name to the trigger preventing all adhoc labels triggering if a label is specified
- Work order line issued qty renamed to WIP Qty
- Fix for Work Order tab UI not showing calendar
- added an option to the Global Config to allow us to toggle credit warning prompt on priority change
- Fix for date format in stocktake summary Excel report
- Stocktake offline structure changed to per line instead of by receipt
- Added company name to home screen
- Work Order Creation duplication bug resolved from rapid successive edits to the order
- Prevented the Creation and Edit window for Work Orders from being opened more than once at a time
- McMurrays Haulage courier supports future shipment date for DDAY with automatic calculation of the earliest viable deliver date within 2-5 working days
- Updated Newtonsoft.Json & SSH.NET due to security vulnerabilities
- All Library/Package references updated to latest versions
- Stock level and bin tab sorted based on bin name
- Work Order and Line allocation dialog will no longer display if allocated fully already
- IQ, Deleted SO, PO and WO's will now sync to WMS and attempt to delete the respective records
- IQ, Orders edited/created within 1 second of the API request are missing in the response, added re-processing for the last 3 seconds to account for this
- Company Name alignment corrected to align with 'BRIDGEWMS', was previously slightly off
