**WMS Version 1.42 Development Release Notes**

### Bridge WMS

- IQ sync now pulls down 'Source' field on Sales Orders. Also added a config option to allow orders of certain sources to be excluded from syncing to WMS
- Purchase and Sales Delivery Note deletions within IQ will now sync to WMS, returning issued stock to the pick bin and writing off receipted stock
- Fix applied for deleted Line in Opera not reflected in WMS
- Added new calculated field to display Packer for a sales order
- Shipment edit option after receipts added
- Added 'Stocktake ID' to FTP Stocktaking so that you can upload a file for multiple warehouses/stocktake
- Added functionality to use Sales Order Number as the delivery number for IQ Split Delivery Numbers
- FTP Stocktaking change: Skip over failed lines and write them to a separate 'Failed transactions' file
- Improved error message for authorisation error on stocktake to include product reference
- Added confirmation on closing HHD config form without saving
- Added calculated field to Stock Transaction records to show all serials on the transaction separated by a comma
- Stock Transaction tab, 'Serial Number' search field is now a LIKE filter, allowing partial searches
- Stock Transaction tab, right click 'View Serials' can now be done on more than 1 transaction at a time
- Bridge FTP processor will now error if the console or service is already running on the same machine
- Sales Order editing will now prompt to confirm no delivery address is acceptable rather than erroring upon saves
- Fixed Sales Order Pick tab date filter not applying to grid results
- Sales Order despatching without a package type will now confirm that no package type is acceptable rather than erroring
- New setting added to allow for manual non-stock processing against Purchase Orders only
- Transfer List Completions will now prompt for a printer to produce a completion report, applies to marking as complete and receipting to completion
- Fix for Free quantity not updating correctly after pick/cancel pick if different despatch warehouse set on global config
- FTP Import to error / indicate the import is using the wrong separator type instead of saying processed successfully when it has done nothing

### Windows Mobile

- Stock Requisitions now error when attempting to send stock on a completed requisition
- Fixed Sales Order 'Max Look Ahead' returning orders 1 day ahead of the limit

### Android

- Fix applied to progress to the next process upon the barcode scanning at the end of cluster picking  (after picking each line)

- Added new option to prompt for completion printer within Transfer List Unloading
- Transfer List Sent label triggers are now supported
- HHD picking now only brings down allocated lines unless all lines are unallocated
- Fixed Sales Order Picking not following the pick route when configured to do so

**<u>Proof of Delivery</u>**

- Images are sent to the WMS system at 60% quality to reduce transmission time (6MB~ down to 900KB~)
- Full quality images are now saved to the gallery for easy access
- Fixed loaded packages destined to the same address missing from the device
- Deliveries to the same address are now shown on the same row to be processed in bulk (preventing strenuous back and forth to the van for delivering)
- Scanning any delivery number for a group of deliveries to the same address will show all packages on all the deliveries to be signed off by the customer
