BRIDGE WMS

WMS Version 1.52

WMS Version 1.52 Development Release Notes

Bridge WMS

- Fix for DPD Local Web courier integration.
- Added validation for DataSync to prevent double instance running.
- GRN Receipt Transactions syncing to Opera will use the GRN Line number rather than the order line number.
- Added 3 flags on sales order for part picked, part packed, and part despatched.
- Added a new setting to Global Config to 'Return to Quarantine bin', unconfirmed transactions for returns will automatically go to the quarantine bin.
- Product code is now displayed in the window title of the StockCard.
- MJMAdmin account can no longer be marked as inactive preventing active support.
- Option to update database on installer, without closing form, for updating multiple companies.
- Improved the error when an invalid connection string is supplied.
- Syncing 3 new fields from CSTWH (cs_minst, cs_reordl, cs_reordq) between Opera and WMS.
- Additional prompt added to confirming transactions on serial and bridge only traceable products to prevent accidental auto-generation of serials.
- Fixed "Total Quantity Including kit component stock" not counting non kitted lines.
- Change done on partially packed order status calculation for Sales Orders.
- Corrected Logs in system manager to display in descending date order.
- Option added to set delivery email notification based on warehouse.

Windows Mobile

- Courier retry dialog now displays the error rather than before.

Android

- Added prompt to control if order should be packed and despatch at the end of creating sales order on handheld.
- Added functionality to 'sales order create' to allow editing of already created orders.
- Fixed work order Lines with 5 decimals and large quantities not syncing to WMS due to overflowing.
- Prevented check for oldest expiry date on non-expirable product.
- On stock lookup, changed bin lookup when scanning bin to not run on UI thread, preventing 'android not responding' message.
- Added config to ignore expired batches when warning about not using oldest expiry.
- Added a skip button to WO Issue and allowed entry of 0 quantity.
- Fixed not adding prefix to order number and scanning of order numbers not working.

- Added config to allow sales orders to be packed and despatched even if posting to courier fails.
- Added config to control display of instruction on sales order header screen.
- Prevented sales orders being opened for packing by multiple users.
- Changed bin list on WO Issue to show batches with traceable items and 'group by batches' enabled.
- Fixed picking leaving lines in pick preventing them from showing in packing.
- Images for packs are now done by package and are saved to a folder per delivery.
- Corrected spelling of customer in 'Auto Pack for Customer Code' config.
- Fixed being able to open orders in pack by another user, using list view.
- Prevented 'create pack' from crashing when no image set in passed pack.
- Fixed crash in picking when selecting 'order by list' with 'pick by zone' and 'display order comments' not set to all/none.
- Fixed: over issuing work orders lines no longer cancels quantity entry.
- Changed entered total weight in picking/packing on HHD to go into the weight field (gross) instead of net.
- Fixed picking not prompting for dimensions with pack by line.
- Fixed scanner crashing when trying to load same order on different scanners in packing.
- Fixed 'editing sales orders' on android setting unit price to 0 and stopped lines from being duplicated when changing tabs.
- Fixed 'pallet type combo' not being enabled in picking when not using the enter key to go to the box number textbox.
- Stopped finish button from skipping serial entry when on quantity screen for serial items in picking.
- Fixed 'no package type' error message crashing android 11 in package selection when packing.
- Fixed not being able to delete/edit lines after deleting a line above it on the grid in android create sales order.
