

WMS Version 1.59 Development Release Notes

Bridge WMS

- Added an option to split unconfirmed transactions, so smaller quantities can be confirmed against different bins.
- Added the ability to allocate individual non-stock/labour lines from WO manager.
- Added support for MRP to be able to operate as part of the base system.
- 2 new fields added to product: for allocated and free quantity.
- Sales Order create now checks if a product is dormant before it can be added to a sales order.
- Modified warehouse sync to always create default bins regardless of presence of MultiBin.
- 3 new fields synced from Opera to the product table. Last Issue, Last Receipt, and Extra2.
- Option to ignore the pending transactions upon re-syncing failed stocktake Data Sync.
- Fixed Purchase Order receipt syncing to Opera from failing, due to exchange rate overflowing the cost.
- Added functionality to create an empty Sage Project on Sales Order creation via WMS.
- Added new functionality to allow Sage invoices to be generated on confirmation of the delivered date rather than at the point of despatch.
- Fixed Sage syncing to prevent 0 quantity or removed lines from preventing the sync.
- Fixed Sales Order line edits for Sage within WMS from erroring due to an illegal edit status.
- Fixed being able to approve partial completions out of order potentially affecting Opera pricing.
- Fixed being able to create an infinite number of unapproved completions if you didn't approve any of them.
- Added Sales Order 'overall discount' to sync from Opera and be visible within Despatch Manager on the header and lines.
- Fixed foreign currency Sales Order despatches from WMS to Opera incorrectly calculating the transaction sales price.
- Added 'total overall discount' and 'total line discount' to Sales Order line and fixed total sell price after discount calculations.
- Fixed Sales Order delivery address lines changing when syncing a new order to Sage and back.
- Option added to delete all barcodes for a product if it is deleted from Opera.
- New order discount field against PO to show total order discount.
- Fixed highlighting of stocktake lines on zero-count lines for traceable and non-traceable products.
- Fix for updating allocations when mark as complete and close the orders.
- Fixed calculated field 'order sell price after discount' incorrectly showing the discounted Sales Order value.
- Added support for syncing of BOM deletions from Sage to WMS.
- Fixed Sales Order line edits to quantity within WMS not updating the cost in Sage.

- Added support for Sales Order customer and Purchase Order supplier changes to sync from Sage.
- Added check so that if default printer and trigger automatically are enabled, there will not be a printer prompt.
- Fixed discount percentage showing up as 100 times bigger.
- Fixed overall discount in Sales Orders appearing as number instead of percentage.
- Fixed currency formatting for the Sales Order line overall discount field.
- Prevented creation of a barcode with the same value as a product code.
- Refactored grid presentation formatting to be easier to maintain.
- Auto generating serials will now correctly copy a user entered expiry or manufacture date.
- Fixed 'total Sales Order available for pick qty Including Kit component stock' not correctly calculating component stock when multiple components with different quantities exist.

Android

- Packing changed to display keyboard on quantity screen and scanning a barcode into the search box leaves quantity blank.
- Show prompt to the user after picking completed for each line if scan and increment option enabled.
- Fixed PO receive all when prompt for quality and condition is enabled.
- Fixed search error for invalid product in offline mode.
- Fixed order line picked alert prompt not showing correctly for traceable products.
- Fixed stocktaking crash error on android when date of manufacture is disabled.
- Changed how keyboard is triggered to make it more reliable at showing in packing.
- Stock movements changed Bin Qty to include current transaction quantities.
- Fixed "mark as complete and close" prompt not showing in android picking.
- Fixed packing on android not clearing packer when exiting order.
- Fixed pick label prompt not showing if no labels are set to auto trigger and labels set to auto trigger where not always being created.
- Added courier prompt when clicking line on the line list from header in picking.
- Stopped packing from clearing assigned packer after packing a line if 'unassign packer on pack' is turned off.
- Fixed expiry error on serial stocktaking.
- Fixed create Sales Order creating empty package if there is no stock when creating new orders.
- Fixed no internet message not stopping the user from ticking checkboxes on PO receive.
- Fixed H33 from loading incorrect keyboard when holding scan button in PO Receipts.
- Removed "Pick remaining from different bin" when there is no stock left to pick.
- Fixed "prompt for package label quantity" stopping courier label printing on android and added functionality for it to work correctly by printing that number of courier labels.
- Fixed data of manufacture not saving in stocktaking.
- Fixed selected batch in picking not being reset when changing bin.
- Fixed mark as complete and close always showing when "only prompt for last pick" config is enabled.
- Matched the font size on the "weight", "show completed lines", "total packed", and "pack all" text on the packing screen. - 600dp.
- Fixed some 500dp issues that can be accessed when using screen zoom.

- Fixed scanning of GS1 barcodes in the Stock Taking 'product' field not splitting.
- Fixed package type prompt being greyed out to the default on first pack in SO Packing.

POD

- Added detailed POD email template.
