BRIDGE WMS

WMS Version 1.60

WMS Version 1.60 Development Release Notes

Bridge WMS

- IQ data sync has been fixed; some transactions were missing because of the API connection dropping during sync.
- The rounding on the WO Issued/Unissued quantity fields has been corrected.
- Fixed sell prices, discounts, VAT values and percentages on SO and lines that were formatting incorrectly.
- Moved all global options out of the manager options forms and into the global config.
- Fixed SO tabs from refreshing twice upon entry.
- Fixed product tab refreshing for a failed dormant assignment.
- Added courier dropdown to delivery form (Can now specify courier and service).
- Factored quantities are now stored as units rather than decimal for increased accuracy.
- Improved HHD Config, SO Tab, 'AutoScroll' size to make settings accessible for smaller screens.
- Added config to rename overall discount to invoice discount.
- Changes in customer product table to be able to use the code in product lookup.
- Extended support of the factored quantity changes to FTP file processors.
- Added new filter checkbox to SO in pick tab to enable visibility of orders stuck in pick after completion (enables ability to remove from in pick).
- Fixed manager tabs missing icons when deploying bespoke functionality.
- Added return type filter option to Stock Manager transactions tab.
- Added 'legacy PO receipt reference' option to global config.
- Improved 'add shipment' and 'add to shipment' functionality, added a new column for quantity, improved column header text, added a max quantity button to prefill with the outstanding quantity and delete key support to clear the selected quantity cells value.
- Added replenishment levels tab in Stock Manager.
- Fixed duplicate and blank tabs when adding tabs.
- Fixed stock take lines tab highlighting for unexpected counts not applying.
- Fixed grid view record double-click navigation for new tabs.
- Fixed add stocktake line form only accepting decimal quantities.
- Added edit/delete context menu items to replenishment level tab.
- Enabled refresh on checking/unchecking the "show all orders" filter on the "in pick tab".
- Adding support and syncing for PO overall discount, corrected grid fields for new factored quantity logic, corrected discount + vat + foreign currency grid calculations.
- Fixed SO and SOL 'outstanding and VAT cost' column calculations to be more accurate.
- Removed some duplicate columns being visible in the SO pack tab.

Android

- Added text to show if product is a kitted product or component when picking.
- Added error message to create transfer list after entering a product with no stock when auto sending.
- Added new panel to set courier and shipment date.
- Removed additional "remaining quantity" label from sales order packing.
- Fixed skipping lines issues for kit product/component text.
- Bin field on stocktaking serials list view no longer populates bin tab with expiry dates.
- Re-added "quantity remaining" text but only visible when the product is serial traceable.
- Stopped create pack from using the wrong warehouse when despatching lines picked from multiple warehouses.

- Added dialog when cancelling serials entry in stocktaking to clear product and another dialog to add the current product when finishing.
- Fixed picking showing empty bin when stock is used by another user while in picking. and fixed bin button on batch items leaving buttons greyed out when no stock.
- Fixed clicking through menus on android too quickly causing the screen to go blank when pressing back on user entry.
- Fixed factored quantity handling on android, also fixed factored values on the review screen, and added a check to make sure a "/" is used for factored quantities.
- Fixed the default warehouse not being recognising if it was lower case.
- Fixed not being able to stocktake single serial with expiry date on android.
- Fixed H33 remembering last scan and using it when no barcode is scanned.
- Added new setting to prefill label quantity with receipted quantity on PO receiving.
- Stopped error appearing when default print quantity is blank on entering PO receiving.
- Stopped printing crashes on other android processes caused by changes in PO receiving.
- Fixed label print prompt in sale order packing not controlling label output.
- Courier information boxes no longer touch the edge of the prompt.
- Added extra check for disabling second package type entry when "Split by entered box count" is disabled.
- Prevented picking of order with line in different warehouse without limit to warehouse or "use sales order header or default warehouse" enabled.
- Stopped the courier screen from being displayed when no stock of selected line.
- Fixed stocktake crashing when trying to print labels for non-serial items.
- Fixed grids that are displaying null values getting misaligned when scrolling.
- Fixed despatch label dialog not closing after selecting label in packing on Android.
- Removed "Finished picking" message after entering quantity when not scanning.
- Stopped SO create from creating an empty delivery when no stock of any lines.
- Fixed greyed out buttons when picking an order with no stock that has picks that haven't been packed.
- Removed prompt for printing labels on kit components in picking.
- Added courier printer prompt to android picking and packing.
- Autofill expiry date and date of manufacture for traceable products.
- Fixed crash in WO complete when changing bin and prevented changing of warehouse when entering bin.

POD

- Changed POD to send delivery email after images are sent.
- POD Email now only sends one per delivery, rather than one per package.
- POD Detailed email attachments are named better.
- Made POD final screen scrollable for smaller devices to not be unusable with a longer address field.

Windows Mobile

- Stopped windows mobile from dispatching pack after picking with pack-by-line.
