- Fixed crash from scanning barcode into sales order pack after minimising and reopening the app.

## **WMS**

- Sage 50 - Fixed PO memo not writing to analysis fields on order edit or create.
- Sage 50 - Allowed setting / editing of empty due dates on SO edit form.
- Fixed unhandled exceptions in the unconfirmed transaction form when using context menu with nothing selected.
- Editing option added for stock take reference field.
- Improved due date logic in Sales Order editing.
- New menu added to toggle hold on batches in the batch tab.
- Sage 50 - Fixed historical receipts done in WMS disappearing from Sage when another receipt is done.
- Sage 50 – Purchase Order receipts + Sales Order despatches now sync into WMS.
- Added approval date filter to Purchase Order line receipts tab.
- Replen levels now allow min/max to be the same value to hold stock always at that level.
- Reworded opera specific Stocktaking UI to generic "ERP".
- Switched order of stocktake line grid colouring to improve performance.
- Added last cost to stock Ccard and improved general alignment.
- Fixed despatch manager refreshing twice on first open.
- Fixed hidden fields appearing in the despatch manager when scrolling between pages.
- Fixed Sales Order despatch syncing to Opera against foreign currency sales accounts taking the order balance negative.
- Changed "default from WH to dest WH" to "set to WH as from WH", also fixed some other config issues in handheld config.
- Added new field 'line number' to unconfirmed transaction table for Sage 50 to match new Receipts/issues to the correct order line.
- Prevented users from creating new users with blank usernames. Users should ensure users usernames are the users names.
- Merged work order completion options from separate 'full' and 'partial/over' completions into a single process.
- Fixed global config global batch and serial not stopping next batch and serial from enabling, and vice versa.
- Prevented rolling batch from enabling unless the global batch number is enabled.
- Prevented being able to set a product as expirable if any stock exists without an expiry date.
- Now prevent setting a product as expirable if there are batches/serials that exist without an expiry date
- Fixed purchase order receipt quantity edit issues for serial traceable products.

## **Windows Mobile**

- Fixed FTP upload using wrong slash in file paths.

## **KwikStock**

- Fixed freezing forms while loading/saving.
