WMS Version 1.68

WMS Version 1.68 Development Release Notes

Android

- Option added to always clear packer after packing.
- Fixed crash in PO receipt when entering quantity less than 1 on Factored items with "use pack QTY in totals" enabled.
- Fixed bin not being changed when using bin button on put away list.
- Added retry prompt from picking to packing after failed to create pack.
- Fixed crash in stock movements after autogenerating serial numbers and pressing review.
- Fixed SO Create skipping pack label when not dispatching and when offline always showing label prompt even if set to auto trigger.
- Fixed crash in PO receipt when entering batch with "display empty bins" enabled.
- Added ability to park order in packing on android.
- Added support for Inverse currency exchange rates. Added Opera syncing of these fields to SO/PO.
- Added error sounds.
- Added ability to pause SO create in offline mode.
- Added config to reset label copies after every stock movement/transfer and fixed copies not being selected when opening.
- Changed Android label printing to strip asterisk from label names before sending back to LiveLink.
- Fixed error sound not playing on android 11+.
- Fixed "display parked orders" not filtering parked orders in packing.
- Added setting to prevent force scanning on grid in bin replen on Android.
- In SO Create prevented swiping back on list of paused orders from showing the header screen.
- Added a flag to bins to prevent only SO picking from it.
- Added prompt when QA required to PO receipt on android.
- If batch entry is disabled and lot number is enabled, then populate lot number with batch information from GS1 barcode.
- Added pallet sheet printing to Android matching windows functionality.
- Stocktake ID added to stocktake review.
- Added check for explicit supplier lookup when using supplier lookup with shipments enabled.
- Shipments now need to be enabled for container PO lookup.
- Fixed pack all button in packing repacking all previously packed lines and re-adding already packed lines to total weight.
- Added ability to dynamically change between "total boxes" and "total pallets" based on the package type selected.
- Added config to prompt for pallet comments in packing.
- Fixed keyboard not showing on printer screen when first opening.
- Fixed surcharge error appearing behind courier info box and crash when "courier selection on desktop only".

- Fixed scaling of stock images in picking so smaller images scale up more.
- Added config to take multiple photos when packing.
- Fixed not showing stock from quarantine warehouse and added config to allow transfers from quarantine warehouse.
- Fixed shelf-life warning not appearing when scanning batches.
- Sped up scanning of batch numbers into picking by removing unnecessary LiveLink calls.
- Fixed pausing in SO Create populating customer when resuming when left blank.
- Fixed crash when entering serial number in packing on picks with invalid Transfer Out transaction against them.
- Fixed QA quantity showing a value below 1 being required in PO Receipts.
- Stopped comment prompt from showing when package type is not a pallet in SO packing.
- In SO create fixed buttons on list of paused orders not showing on devices with large screen sizes (TC26).
- Fixed error when printing multiple pallet sheets and when deleting lines pallet sheet lines would be kept on print output.
- Fixed batch entry in picking accepting batches with expired shelf life when scanning GS1 barcode.
- New Icon for pallet sheet printing added.
- Fixed ability to skip expiry warning when scanning from product code entry in SO picking.
- Fixed pack failing at end of pick with unexpected result count error.
- Fixed oldest batch prompt in SO picking for non-expirable batch traceable stock with no expiry date.

WMS

- New user permissions added named 'Purchasing Editor' and 'Purchase Order Receipt'.
- Fixed quantity screen on transfer list not prefilling with preferred pick bin.
- New settings added on courier to enable dimension and surcharge mandatory on despatch.
- Managers now remember where it was opened previously upon reopening the window.
- Added 'total pending despatch value' field to SO.
- Improved global serial number generation logic.
- Printer settings are now saved in more areas of the desktop and auto populate in cases where no save is found.
- Automatic despatch notification emails will now include the consignment number if one is present.
- Added an in-stock filter to stocktake template.
- Fixed all ERP specific global config options remaining enabled when form is opened.
- Added option to desktop settings to toggle the printer saving on/off. When off to use default printer for output instead.
- Changed default behaviour to always check ledger account stop unless changed.
- Fixed custom log path to work with system manager log viewer.
- Fixed errors on unconfirmed transaction form when trying to action over 2100 rows at a time.
- Added check to sales order pick tab to prevent non-traceable or batch picks being cancelled out of order and causing a scenario where a pick took place after a despatch.
- Added new fields 'total pending despatch value after discount' and 'total pending despatch value after discount inc VAT' to compliment the 'total pending despatch value' field on the sales order tab.
- Fixed factored batch traceable stock transactions syncing into WMS from Opera 3 with the incorrect quantity.
- Updated 3rd party libraries and packages.
- Updated installer package version.
- Corrected syncing of SO edits and/or creations to Opera 3 with incorrect VAT values for factored products.
- Updated FTP importing to use the quantity formatting logic used in other areas of the system.
- Fixed unconfirmed transaction splitting not accepting factored quantities.
- Fixed scenario where exchange rates of 0 cause division errors.
- Added missing order line ID argument to serial selector in SO packing.
- Fixed an issue preventing the cancel pick process from allowing multiple serials to be cancelled.

Windows Mobile

- Fixed PO receipt showing id not found error when sending receipt.
- Fixed WO Issue not prefilling quantity with the whole number.
- Fixed PO receipt showing incorrect quantity on decimal items.

POD

- Added support for taking photos using scanner button.
