BRIDGE WMS

WMS Version 1.69

WMS Version 1.69 Development Release Notes

Android

- Fixed manually assigned order lines not being opened in pick by aisle.
- Fixed pack notes having no order number in file name.
- Added check so that if the row position exceeds the number of lines on the purchase order it will no longer try and get the incorrect row position.
- Fixed Bin box size on android site transfer lists.
- Added landscape layout for Android tablets.
- Disabled traceable and courier prompting when the traceability or couriers enabled settings are not enabled and disabled WO/SO/PO menu restrictions in HHD config when not installed.
- Fixed adhoc printing not limiting printers by entered warehouse.
- Fixed null reference exception when scanning nothing on Newland Scanners.
- Fixed crash when scanning Data Matrix barcode ending with "92".
- Improved screen sizing on grids for larger horizontal and vertical screen sizes while maintaining existing behaviour for standard screen sizes.
- Prevented courier menu item showing without the courier licence, prevented enabling expirable on non-traceable products, and prevented handhold from doing any stock action on traceable items with traceability disabled.
- Prevented error from showing when prefilling batch with no next traceable set.

WMS

- Corrected PO order balances being updated incorrectly when receiving lines with a factored product.
- Performance improvements made to the transfer list 'SentQty' field.
- Added new despatch manager options to allow the SO date filter to be pre-configured on load.
- Added check before opening the delivery edit form to prevent editing a delivery which is still pending sync.
- Prevented kitted products from having the same product to appear multiple times on the kit component list.
- Added extra form and prompts when ending stocktakes to reduce user error. Added loading bar to authorise form as large stocktakes can hang UI for several mins.
- Added new option to warehouse levels tab to add a new replenishment level.
- Introduction of Bridge WMS lite and Bridge WMS core product licensing includes courier functionality toggle tied to the HHD license.
- Added the MJM watcher to the system for managing services and backups through WMS.
- Fixed serial picker autogenerate not respecting the question box choices.
- Added formatted fields to the 6-transfer list line quantity fields (SendQty, SentQty, ReceivedQty, QtyInTransit, UnsentQty, TotalInFromWarehouse). Reenabled row header on transfer list viewer which acts as line number.

- Updated login screen and help guide to new images.
- New icon for MJM watcher service added.
- Fixed config file maintainer not restoring config changes on install/update.
- Fixed set replenishment level option in warehouse levels tab allowing null or negative values.
- Added logic when switching label in the adhoc form to auto select 'as XML' or separator depending on label.
- Switched itran fields lineval/exvat/vatval from int to decimal to prevent overflows.
- Added logging per transaction success in backend sync. Added transaction sync batch size config to SageSync to prevent long durations without a sync from back.
- Corrected ih_terrtry field being set to blank on new orders created in WMS rather than sn_terrtry as it did prior to us syncing the field.
- Fixed help guide banner exceeding its size.
- Added the sn_extra1 and sn_extra2 fields to sync from Opera to the WMS customer.
- Added missing restrictions to picking, packing, receipts, and transactions on traceable products when traceability is not enabled.
- Added missing restrictions to editing orders and despatching multiple orders to limit courier functionality when it is not enabled.
- Product code added on the "insufficient stock" message on a failed despatch due to stock not being in the OUT bin.
- Fixed the format of traceable details display on PO receipts tab.
- Changed "unloading" to "delivery " in handheld config to match scanner to avoid confusion now we have the unloading functionality on POD.
- Order reference will be added to comments on SO pick transaction for kitted products/components.
- Fixed backup reporting success if it failed.
- Fixed flow control in the service manager jumping around depending on the selected service.
- Ensured syncs are in order of creation by including the ID in sorting order to the date time.
- Fixed outstanding SO sell price fields going negative in some scenarios.
- Fixed global config "use product next batch/serial number" and "use global batch/serial Number" not being enabled/disabled when entering the global config.
- Fixed WO reset erroring due to dividing by zero on sync to Opera 3 for non-factored products.
- Updated bridge desktop home screen to match login screen changes.

Windows Mobile

- Fixed window mobile not printing WO complete label when selecting to print label with auto trigger disabled.
- Fixed crash when at end of picking when packing on windows mobile.

POD

- In POD added ability to unload packages from handheld and added config to hide direction buttons.
