### WMS Version 1.71

#### WMS Version 1.71 Development Release Notes

##### Android

- Fixed WO phase progression always giving "No Phase Selected" error.
- Fix for SO creation against deleted customers on offline mode.
- Added config to prompt for the bin and product at end of stock replenishments.
- Added printer warehouse limit to simple and pallet printing and added config for the functionality.
- Fixed pallet sheet not being created and fixed the focus not moving after scanning product and changed wrapped by to picked by.
- Fixed weight calculation for factored items on sales order packing
- Added check for HHD version to Livelink.
- Added config to skip prompt for packing unpacked lines and always pack them.
- Added new config to picking to warn if entered product is on a WO.
- Added check for matching product code when scanning GS1 barcode into batch screen in PO Receipt.
- Fixed user ID box stretching off the screen when version mismatch error appears.
- Fixed PO receipt trying to autogenerate when serials numbers are entered.
- Fixed not being able to pack orders with duplicated sales order numbers.
- Fixed check for matching product batch barcode failing on barcodes with no product code.
- Fixed incorrect product error showing behind dialog in Android 11+

##### WMS

- Option added to mark order as completed in WMS to hide the orders showing in grid.
- Fixed POLR sync not respecting inverse rate causing costs to be updated incorrectly in Opera.
- Option added to set the warehouse against the SO header when creating SO.
- Corrected POLR cost syncing when WMS new unit price logic is used on a foreign currency order.
- Corrected SO creation/edit forcing unit prices to be rounded to 2dp, now uses global config max decimal places.
- Added put-away bin name field to stock level table.
- Option added to create new batch upon confirming unconfirmed return transactions.
- Added traffic light service status to main form.
- Fixed layout manager sharing not working when a UNC path is set.
- Corrected SO line customer product barcodes returning every record for the product instead of filtering by both customer and product.
- Added whitespace check when entering Batch/Lot/Serial numbers for new stock on desktop.
- Added default tab ordering to the receipt manager tab.
- Option added to set the UKIMS number on WMS Desktop.
- Fixed the WO 'First Phase Qty' field to match the 'Last Phase Qty' field.
- Fixed new products created in Opera 3 having their transactions ignored if done before a WMS product sync completes.
- Changed wording of batch/serial whitespace character error messages.
- Failed transactions now record the error into the 'Error Message' field.
- Tabs will remember the last sort order before changing the tab when you change the tabs in despatch manager.

##### POD

- Added version number to Livelink calls.
