BRIDGE WMS

WMS Version 1.80

WMS Version 1.80 Development Release Notes

#Android#

- Added pack by customer.
- Removed Line id from purchase order list in purchase order receipt.
- Updated putaway list error when there is no stock in the default in location to be more informative to the user.
- Added password override to limit to oldest batch/serial.
- Fixed clicking too fast on next and complete buttons in packing duplicates packs.
- Added create WO to android and windows mobile
- Added config to prompt for destination bin in stock replenishments.
- Fixed default bin on stock movement issue being set to oldest stock instead of the product's default issue bin.
- Added label creation to standard stock conversion.
- Added nordalp NX21EE scanner compatibility.
- Added drop downs for pre-configured Stock Transaction references and added a config to require comments to be filled in on both Android and desktop.
- Added check for oldest expiry check to changing bin.
- Fixed 'prompt for pallet number and type' causing prompt to part despatch displaying in Sales Order Picking.
- In Sales Order picking fixed scanning barcode on SKU entry not prefilling quantity.
- Fixed crash in Sales Order packing when pressing back just after scanning barcode.
- Fixed bypass button not showing on list of batches in Sales Order picking.

#WMS#

- Migrated Bridge WMS to 64 bit and added 32-bit utils to mediate legacy VFP Data access for Opera 3.
- Fixed Work Order creations from WMS not using the BOM component quantity per assembly yield.
- Sage50 support updated from v30 to v33 as part of the 64-bit migration (older versions are no longer supported from v1.80 onwards).
- Fixed 64bit WMS Lite KwikStock functionality resulting in a null reference exception due to type resolution.
- Fixed POLR approval for factored products incorrectly throwing Opera quantity validation exception.
- Added WMS order numbers to better track created orders within Bridge WMS.
- Added description field to Work Order phases and increased the length of the syncref field to match the phase name field.
- Removed nonsense option from the Kit Designer.
- Service Manager refresh is now enabled by default.
- Added exception visibility to errors from or during BridgeWMSservice32 requests and responses for the end user.
- Fixed packing error caused by user lookup finding the blank users instead of the ID used.

#Windows Mobile#

- Added version number to Work Order Create LiveLink call.
