WMS Version 1.82

WMS Version 1.82 Development Release Notes

Android

- Added warning when transferring stock to a non-pick bin in Stock Transfers and Put Away processes.
- Added ability to find Work Orders via the Sales Order number.
- Fixed packing with images when using pack by customer.
- Added configs for "Cluster Pick by Shipping Reference", "Cluster Pick Self Assign", and "Cluster Pick Bulk Despatch".
- Added a length limit to the reference field in Work Order create and added processing of GS1 barcodes on the header screen.
- Fixed quantity entry errors preventing enter key use in Sales Order Packing.
- Fixed serial receipt output file being in the incorrect format (correctly prefixing "0000" where appropriate now).
- Fixed Product-Batch separator not working if set to "|" on android.
- Fixed not being able to park packed orders on scanner.

WMS

- Fixed Work Order creation syncing to Opera failing due to null/empty order comments.
- Changed Work Order creation for Opera backends to use "PENDING" as the Work Order number until synced to Opera to obtain the true order number, preventing identifier clashes between the 2 systems (also added the WMS Works Order number to the Works Order Form in Works Order Manager).
- Fixed Null Reference exception on entity build result when the value expected is null, changed sync to now throw an exception so SyncError has adequate data for the end user.
- Added filter to Sales Order Line inward sync to exclude lines that are for headers which have a document status, 'C', 'Q', 'U' and 'P' (if configured as such) and ignore descriptive lines.
- Fixed Opera SE Work Order Line issue and allocation for single line orders erroring.
- Added new field, 'Shipping Reference' to the Sales Order table with functionality to set the value in Despatch Manager for users with Sales Order Editor permission.
- Fixed error on removing bins from hold when the reason field was not enabled, have also improved the message for blank reasons.
- Added setting "Enable Advanced Packing" to Global Config to enable setting that was previously in accessible from the UI.
- Added syncing of deleted records from Opera SE to WMS.
- Updated MRP suggested reorder quantity to account for both the Work Order quantity and outstanding Work Order line quantity.
- Added optional extras config areas ready for version 1.83.
- Resolved SyncError duplication when syncing to and from Opera SE.
- Enabled SyncError visibility in Stock Manager for Opera SE backend.
- Improved MRP Re-Order Quantity field performance and added additional database indexes for involved fields.
- Changed BOM SyncRef to use Assembly Code + Sequence rather than Assembly Code + Component Code to handle edits from Opera correctly.
- Fixed 'WorkOrderReset' not syncing to Opera SE due to missing a property attribute.
- Fixed Sales Order Pack 'Despatch All' not restricting the despatch to the warehouse currently specified.

Windows Mobile (Maintenance Mode)

- Added warning when transferring stock to a non-pick bin in Stock Transfers and Put Away processes.
