WMS Version 1.85

WMS Version 1.85 Development Release Notes

Android

- Fixed Android not calculating gross weight in Sales Order picking.
- Added a new setting to move the courier prompt to the end of Sales Order picking.
- Fixed Bin validation in create requisitions not using the entered warehouse.
- Added a new setting to send stock take Lines back as they are counted.
- Fixed a crash in Sales Order packing when parking an order with an empty package.
- Fixed Create WO preventing adding of out-of-stock components when not auto issuing
- Fixed being able to receive the first Purchase Order line if multiple lines for the same product are on the Purchase Order.
- Added functionality to Sales Order packing to despatch already packed lines without packing more.
- Fixed stocktake counts being duplicated and fixed not being able to delete counted traceable stocktake lines in Stock Manager.
- Fixed Stock Return of batches introducing incorrect quantities when the return is to an alternative bin the batch was issued from.
- Added support for the "Return to alternative bins" global config.
- Improved reading of GS1 codes in data matrixes to not be incorreccted detected in non-GS1 barcodes.
- Fixed stocktaking resetting the 'InProgress' flag when sending lines to the server.
- Fixed duplicating of batches in Stock Movement when showing the batch expiry prompt.

WMS

- Added a new cash account visual flag for customers which can be set within Contact Manager.
- Changed login warning for over 100 failed or unconfirmed transactions to only show for admin users.
- Renamed the "Enable return bin location when setting batch" to "Enable return bin location when setting traceable" and added functionality to use serials with this setting.
- Enabled serial support for the "Returns to alternative bins" setting, serials can now be returned to other bins than the one they were issued from
- Negative supplier cost % updates now correctly update the supplier cost in Opera.
- Now preventing "mark as synced" on stock transactions that are linked to sync transactions and "Reset failed flag" on failed stock transactions, an error appears preventing the user from doing this.
- Added product description to requisition grid.
- Fixed "Use courier printer for delivery notes" not working when the printer is not linked to a warehouse.
- Fixed not being able to delete a counted traceable stock take line.
- Fixed Work Order reset incorrectly leaving WIP balances in Opera when more than 1 line for the same product exists due to sub assembly building.
- Fixed Work Order line tab not being sorted by line order causing confusion for sub assembly parent visibility.
- Added support for empty supplier stock references in manual supplier cost updating.
- Fixed handheld config not showing all settings when scrolling.
- Fixed Purchase Order creations from WMS incorrectly updating supplier order balance in Opera due to decimal formatting.
- Fixed supplier products appearing with no economic order quantity or price in WMS when using Opera SE.
- Enabled Purchase Order and Purchase Order line creation syncing from WMS to Opera SE.
- Fixed Purchase Order creation failing to sync to Opera SE with no currency.
- Fixed log files not creating a new file after the size limit is reached.
