

WMS Version 1.86 Development Release Notes

Android

- Added job costing column to Sales Order picking with support of "Job Costing before Due date" config
- Fixed Janam scanning of serial barcodes in Purchase Order receipting.
- Changed pick routes to allow bins from different warehouses to be added and changed WO issue to use pick routes.
- Fixed batch number not prefilling in Work Order complete after scanning the product barcode.
- Fixed bin not being shown on HHD when picking Work Order assemblies without pick sub-components enabled.
- Fixed handheld Work Order Issue skipping sub-components lines when the parent component wasn't before them in list sent to HHD.

WMS

- Flipped service desired state in the audit log to be the correct way around.
- Fixed marshalled and held bins from appearing in Work Order Issuing on desktop.
- Updated stocktake transactions to contain the Stocktake ID in reference field 1.
- Fixed the Sales Order tab under Handheld Config not having a white background like the other tabs.
- Added supplier product editing sync for Opera SE.
- Fixed Work Order line allocation sync checks for Opera SE.
- Fixed total order weight, total order net mass, and total order gross weight incorrectly calculating due to factored quantity products on the grids.
- Added new default user label template to the installer outputs.
- Updated Microsoft.Bcl.Cryptography library to 10.0.13 due to a security vulnerability.
- Changed handheld config to disable GS1 in QR codes to also include Data Matrix.
- Added new global config Sales Order setting "Pick New or Edited Lines" to enable or disable the picking/prompting of new or edited Sales Order lines within Despatch Manager.
- Fixed Sales Order edits within Despatch Manager not allowing serial or non-stock products to be picked.
- Reduced CPU usage in DataSync with the introduction of faster entity lookups for sync comparisons.
- Fixed CNOML (Stock Nominal) values being multiplied by the factored quantity for stock movements rather than the unit quantity in Opera 3.
- Fixed CNOML (Stock Nominal) values applying exchange rates twice for foreign currency despatches in Opera 3.
- Fixed product changed sync failing due to minimum assembly quantity being null.
- Fixed Work Order line Issue failing when the line is a sub-assembly and the last line to be issued due to a NullReferenceException.
- Added error log for ConfigFileMaintainer for errors pre-processing.
- Updated System.Security.Cryptography.Pkcs transitive references to the latest version due to security vulnerabilities.
- Fixed Work Order sub assembly lines not being returned to the scanner for issue if there is no stock in the warehouse against the line when the assembly is to be built from components.
- Changed pick route to allow warehouse to be blank, added field to store ids of all warehouses and added column to show warehouse when editing pick routes.
