MJM DATA CAPTURE

BRIDGE WMS

The Complete Warehouse Solution

Works Order Manager

The Bridge WMS Works Order Manager tracks the complete production process. This means that orders can be tracked from manufacturing to delivery with ease. Orders are added and monitored by order number, product code and operation stage throughout production. This order information is updated by scanning the item/order at each processing stage with a hand-held device.

Issue to Order

Works Order manager allows orders to be added and monitored in real time. It shows stock that has been issued out to create the order to ensure all stock remains visible. Works Orders can also be built inside other orders with sub-assemblies, streamlining the completion of orders.

Key Features:

- Stock can be allocated to order.
- Reduces risk of human error.
- Increases control of production.
- Sub-assembly.
- Issues stock used in Works Order.

Progress Works Order

The progress of Works Orders can be tracked at each stage of the process. Orders can be scanned on the Handhelds to easily display the Works Order progress. The progress of the Works Order is sectioned into phases to show each stage of production to ensure greater clarity of the data shown.

Key Features:

- Move order through different stages to show stages of production such as assembly, painting, finishing.
- Phase timing tab allows phase monitoring with start / end time.
- Allocated stock cannot be used in any other transaction.

Complete Works Order

Once the order is issued and progressed to the final phase it can be completed receipting the finished product into stock ready for picking.

Key Features:

- Creates final product.
- Final product can be traceable.
- Partial/over completions.
- Works Order reset.
- Barcode label can be generated on WO completion.

Order Create

Works Order can be raised against a product with stock to be issued to create it.

Key Features:

- Create new orders.
- Edit orders.
- Create report.
