- Users now have the ability to select a date range within the Traceability report.

Bridge Multibins Server

- Fixed the bug that caused some users to have trouble with the 'Edit Bin' Utility.

- Modifications have been made to allow users to store the delivery notes PDF in the PDF folder and for Bridge to use the standard Opera routines for producing Delivery notes.

- Fixed the bug that caused some users to have trouble when importing a received purchase order that included a text line.

- Users now have the ability to print labels from the 'Send Purchase Orders' screen.

- Fixed bug that prevented some users from printing an invoice whilst the pick face noted insufficient stock.

- Issues with the stock allocation figures has been fixed, this will no longer affect the figures for available stock.

- Modifications made to allow users to apply tax calculations to individual stock items.

Bridge v4.40 October 2013

Bug Fixes

Bridge Mobile

- Bug fixed that would not allow some users to skip a line in an order without the skipped quantity being added to the following order.

- Users are able to scan stock items within an order in any sequence when using the LiveLink module.

- Bug fixed to enable LiveLink to recognise when stock items have been picked.

- Bug fixed to enable LiveLink to recognise products without error message.

- Within 'Product Lookup', users now have the ability to record barcode numbers for stock items.

Notes for Bridge Standard Server

- Sales orders are taking the order date from the scanner and purchase orders are taking the order date from the PC.

- When generating a pick list in MultiBin if the user prints the pick notes, the 'Generate Pick List' screen will automatically close.
